ORGANIZATION CHART FOR VIRGINIA STATE DEPARTMENT OF EDUCATION 1949-50

Seventy-ninth Annual Report of the Superintendent of Public Instruction 1949-1950

INTRODUCTION

Effective September 1, 1949, G. Tyler Miller resigned as Superintendent of Public Instruction to become president of Madison College. Effective the same date, Dowell J. Howard became Acting Superintendent of Public Instruction, in which capacity he served until May 16, 1950, at which time he was appointed Superintendent of Public Instruction.

Regional Meetings of State Board

To be effective, a program of education must be carefully planned, sufficiently flexible to provide for individual adjustments as the demands of our society require, adaptable to the needs and desires of local citizens, and as a whole, serve the best interests of the State. The people of Virginia have an important part to play.

The members of the State Board of Education recognize that the success of an educational program in Virginia depends largely upon the degree to which it is understood by the people and that confidence can only be gained by understanding and appreciation. They believe, further, that the people of Virginia should be encouraged and given opportunity to make a realistic appraisal of their program of public education; aid in determining how well the job is being done; recognize the strong points; become conscious of the weaknesses; and participate

in developing plans for bringing about improvements.

To this end, a bulletin entitled, Public Education in Virginia, was published, outlining the purposes, scope and nature of the various phases of public education, and needs for improvement. Distribution of this bulletin was made to educational leaders and other representative citizens throughout the State. They were encouraged to study and interpret the materials preliminary to attending meetings held in nine regions of the State. The meetings, held in the fall of 1949, were attended by approximately 4,000 people, 90 per cent of whom were lay citizens. It is felt that this was a beginning of better understanding and appreciation of the program of public education.

Legislative Action

The 1950 session of the Legislature manifested a very constructive interest in the program of public education. In addition to increased aid to the localities for teachers' salaries and teacher retirement, \$45,000,000 was appropriated for

aid to localities in the construction of school buildings.

In addition to the appropriations, constructive legislation was passed as an aid to improving the school system. The cooperative and understanding attitude of former Governor Tuck and Governor Battle and members of the Legislature serves as a challenge to those charged with the responsibility of administering the public school system.

Evaluating the Program

It is recognized that the people of Virginia have a full right to expect efficient administration of their school system.

In planning and executing a program of public education, the children of Virginia are the primary concern. Efficient plans may be evolved and sound administrative practices executed, but there is no substitute for good teaching. It is, therefore, essential that the program of education be continually evaluated in terms of the degree to which it serves the best interest of those coming under the influence of the school.

The Teacher

Virginia has many splendid teachers. They are conscientious in the performance of their duties. They are vitally concerned with self-improvement. In 1949-50, 61.2 per cent held baccalaureate or higher degrees as compared to 57.5 per cent in 1948-49. The number of uncertificated teachers decreased by 225 during 1949-50.

Five hundred and ninety-two regular term scholarships were granted to students in college preparing to teach and 600 summer school scholarships were

awarded to those already in the profession.

The teaching situation is showing gradual improvement. It, however, remains one of the major problems in public education. Every possible step must be taken to reward the efficient teachers now in the classroom and to attract many

of our finest young people to the teaching profession.

It is recognized that regardless of what else is done, the efficiency of the classroom teacher is a major factor in the success of any educational program. A first essential is that we have an adequate teacher-training program. In an effort to strengthen this phase of the public school system, the following steps have been taken:

a. The State Department of Education has representatives who meet with the teacher-training faculties of Virginia State College, Madison College, Longwood College, Radford College and the University of Virginia.

Representatives of the Department have met with the staffs of the colleges on several occasions. The colleges are making a complete study of their teacher-training curriculum and are making many revisions which indicate definite improvement.

b. In issuing teacher scholarships, major consideration is being given to those preparing to teach in the elementary school. The number enrolling in the elementary curriculum is increasing.

Revision has been made of the certification standards for teachers in Virginia. The major changes are as follows:

- a. Greater emphasis on knowledge of subject matter.
- b. Requirement that elementary teachers have training in subject matter comparable to that of high school teachers.
- c. Increased training in the knowledge of children.
- d. The addition of a higher certificate to be awarded to those teachers who have pursued satisfactory graduate work.

Accrediting High Schools

The present standards have been reviewed thoroughly and every effort has been made to develop standards in keeping with sound educational principles and sound administration. The plan of requiring a certain number to be enrolled as one of the accrediting standards has been discarded. In its place, greater emphasis will be placed on an educational program designed to meet the needs of pupils.

Greater emphasis is being placed on the development of a program of guidance in order that greater assistance may be given to pupils in determining the types of courses most desirable for them.

Teaching of History

A thorough study has been made of the offering in social studies. Greater emphasis is being placed on local and State history, government, and geography. Outlines for teachers have been developed which should be of material aid until such time as we have more adequate texts.

A bulletin is being prepared which includes the following:

Virginia Bill of Rights Section 58—Constitution of Virginia Virginia Statute of Religious Freedom Declaration of Independence.

This will bring together all of these documents in order that they will be easily accessible to teachers.

School Building Construction Regulations

State Board regulations governing school building construction have been revised—the purpose being to give full consideration to use of new materials, designs, etc., and to provide for every possible economy in keeping with provisions for proper educational facilities.

Retardation of Pupils

The failure of pupils to advance normally is one of education's most serious problems. It is of serious concern that only 24.4 per cent of the pupils who were in the first grade in 1937-38 advanced to the senior year of high school in 1948-49. Even after reaching the eighth grade only 59.4 per cent were in the senior year on time. Failure of pupils to advance normally is serious in many ways, among which are: (1) the pupil is failing to get the full value of his educational opportunity, and (2) pupils failing to advance normally are costly in dollars.

It seems reasonable to state that in terms of dollars retardation of pupils in Virginia's public schools in 1949-50 cost the Virginia taxpayer over \$3,000,000, and that the total cost during the past ten years may well have exceeded \$20,000,000.

Pupils must earn the right for promotion and standards must be maintained. On the other hand, the schools must provide offerings and adjust their methods to more nearly meet the needs of the pupils.

Testing Results

Every effort must be made to measure the results of teaching. It is not a simple task. The performance of the child after leaving school is the final measure. During the year 1949-50, however, 40,000 eighth-grade pupils and 20,000 high school seniors were given tests in an effort to measure their ability and progress. Through local testing programs approximately 40,000 additional pupils in 22 school divisions were tested. Testing is not the final answer but the results serve as an important aid in seeking improvement.

Another important step taken to determine the effectiveness of the program was the evaluation of the work of 38 high schools during the year and the publication of a bulletin entitled, *The Characteristics of a Good Elementary School*.

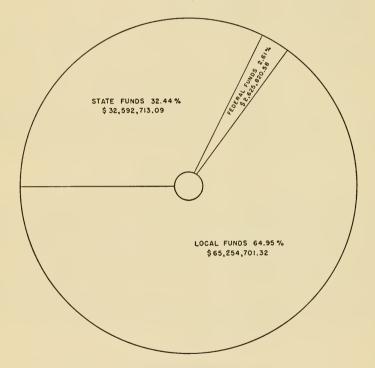

Expenditures for Public Education

A major concern is to equalize, as nearly as possible, the educational opportunities for all children. This problem is in no sense solved. The entire effort in public education is the joint responsibility of the State and local governments. It is felt that the governing bodies on both the State and local level are giving the problem primary consideration. The graph below indicates the distribution of total expenditures by source during 1949-50.

TOTAL EXPENDITURES FOR PUBLIC FREE SCHOOLS IN VIRGINIA BY SOURCE*

1949-1950 (State and Local Level)

\$100,473,234.99

*Not including Federal funds in the amount of \$1,915,640.30 for the Veterans Training classes operated under contract with the Veterans Administration.

Specific accounts of the purposes, scope and progress of the various services of the State Department of Education and statistical and financial data are to be found on the pages that follow.

DIVISION OF ELEMENTARY EDUCATION

PURPOSE OF THE DIVISION OF ELEMENTARY EDUCATION

The principal purpose of the Division of Elementary Education of the State Department of Education is to give leadership to a total program of elementary education in keeping with the law and established policy of the State Board of Education, and to inform the State Superintendent of Public Instruction of conditions and developments in elementary education in order that he may guide policy-making bodies in refining and extending policies which give direction to the school programs of the State. In view of this purpose, the Division of Elementary Education has developed the following long-range or continuing objectives:

1. To stimulate continuous restudy of the program of elementary education in the State at large and in the school divisions of the State to discover evidences of progress and opportunities for further development.

 To coordinate the efforts of the administrative, supervisory, and teacher-training personnel into a unified program of school improvement.
 To lead in the continuous development of a program for the elementary schools of the State as a whole and to assist local school divisions in the development of curricula which are based upon an understanding of the needs of children and society.

In order to achieve these long-range objectives, the Division of Elementary Education engages in certain continuing or recurring activities. In general, these activities are (1) to promote the professional growth of those working in the field of elementary education; (2) to develop the materials which are needed to guide the development of the total program and also to further particular aspects of the program; (3) to coordinate the work of all of the groups concerned with the program of elementary education; and (4) to identify the fundamental problems which tend to retard progress in the development of a well-rounded program of elementary education.

SCOPE OF THE SERVICE

The work of the Division of Elementary Education serves in some degree the entire elementary school personnel of the one hundred counties and twenty-seven cities of the State. For the year 1949-50, the number of elementary schools in the State totaled 2,812. The number of children enrolled in these schools was 458,708. The adults who worked in these schools (teachers, principals, superintendents, visiting teachers, and supervisors) totaled 14,547.

The Division of Elementary Education has a special responsibility for promoting the professional growth of supervisors, visiting teachers, and elementary school principals. The number of individuals in these positions for the year 1949-50 was as follows: Elementary Supervisors 93 white, 71 Negro; General Supervisors 6 white; Directors of Instruction 38 white; Visiting Teachers 78 white, 13 Negro; Elementary Principals (schools of seven teachers or more) 307 white, 65 Negro. Elementary principals employed on a twelve months' basis 42 white, 4 Negro.

Ninety-four of the one hundred counties and nineteen of the twenty-seven cities in Virginia have some supervisory service. Fifty-three counties and nineteen

cities have visiting teacher services.

During the year 1949-50, the members of the Division of Elementary Education worked in seventy-three counties and twenty-two cities upon request for their services from the local school divisions. These services involved one hundred fifty-eight visits to counties and fifty-five visits to cities.

OUTSTANDING ACCOMPLISHMENTS

Conference on Elementary Education.—The conferences which have been held separately for supervisors, visiting teachers, and elementary principals as well as those for supervisors and teachers in special fields, such as music, art, and library science were combined into a joint conference on elementary education at which all members worked on problems related to the theme-Developing Children Through a Program of Elementary Education. Two such conferences were held in March 1950, one at Hotel Roanoke with approximately 600 white participants and one at Virginia Union University with approximately 265 Negro participants. These conferences made it possible for the various professional workers in the field of elementary education to come together and work on ways of solving some of their common problems. They served as a means of bringing about a better understanding of the various services involved, an increased unity of purpose, and a greater spirit of cooperation.

Supervisors and Principals Study Their Services.—The elementary school supervisors and directors of instruction of the State engaged in a study of their supervisory services during the year 1949-50 with a view to writing a statement on supervision in Virginia schools. This work was done largely in the regional supervisory group meetings. The findings of the different groups were compiled into one tentative statement which will be distributed and used for study and revision during the session 1950-51.

The elementary school principals devoted some time to a study of the specific responsibilities of the elementary school principalship with a view to making some recommendations concerning the qualifications needed for this position. The State Board of Education revised the enrollment requirement in straight elementary schools from 500 to 350 as a basis for qualifying for State aid on the

employment of twelve months' principals.

Revision of Qualifications for Supervisory Personnel.—During the year 1949-50, after careful study, the regulations governing qualifications of supervisory personnel employed with State aid were revised. This revision involved several changes in training and experience requirements whereby the over-all standards for these positions were raised significantly.

Visiting Teacher Handbook Revised.—The visiting teachers in their regional group meetings for the year 1949-50 engaged in a study of the Visiting Teacher Handbook for the purpose of suggesting desirable revisions. After several years experience in using the Handbook as a guide in carrying forward their work, the visiting teachers were in a position to offer constructive suggestions for this revision. The revised material will be ready for distribution during the 1950-51 school session.

Two Bulletins Distributed.—As one means of helping teachers, principals, and supervisors with their efforts to improve elementary school education in the State, the Division of Elementary Education gave leadership to the development of two bulletins, The Characteristics of a Good Elementary School and Looking At Our Elementary School, which were distributed to all school divisions during the year 1949-50. These bulletins have been used by teachers, principals, and supervisors in their in-service study programs.

Film on Elementary Education.—Work on the production of a film on elementary education in Virginia was begun in 1949-50. This film, when completed, will show the various types of work being done in the elementary schools over the State and can be used for purposes of study to improve the instructional program along with the bulletin, *The Characteristics of a Good Elementary School*.

Indian Education on State Recognized Reservations.—The administration and supervision of schools for Indian children living on the two recognized Indian reservations, namely: the Mattaponi and the Pamunkey, are special services assigned by the State Board of Education to the Division of Elementary Education.

During the school session 1949-50, a one-room school was operated on each reservation with a total enrollment of thirty pupils in grades one through eight. Beginning in January 1950, a hot lunch program was begun at the Mattaponi School, and operated for the remainder of the session. Noticeable improvement both in physical health and mental alertness was observable.

The four-room building on the Mattaponi Reservation was completely renovated, and refurnished during June 1950. This building will be used during the school session 1950-51 to house the joint Mattaponi-Pamunkey Indian Reserva-

tions School. This joint school proposal was approved by the two tribes at a joint meeting held on June 1, 1950, at the Mattaponi School with members of the State Department of Education and representatives from the two tribes.

Provisions are made for the Indian children to complete their high school education at Indian schools in Oklahoma or North Carolina with their tuition and transportation paid by the State Department of Education from special funds appropriated by the General Assembly. During the session 1949-50, three pupils continued their high school education at Bacone College and High School, Bacone, Oklahoma.

Special Education.—Special Education is concerned with the problems of boys and girls who are exceptional because of physical, mental, or emotional deviations to the extent that special consideration is needed to assist them in their regular school work. It provides consultative services to local school divisions on problems of exceptional children and makes financial aid available for: orthopedic classes in regular schools, teachers of homebound children, teachers of hospital classes, and teachers of speech and lip reading.

Growth of the Program.—The program was started in 1938-39 and during that year eighteen counties and four cities made special provisions in their instructional programs to meet the specific needs of 6,197 exceptional children. Reports for 1949-50 indicate that sixty-four counties and twenty-two cities participated in the program and that 25,153 exceptional children, including 2,659 gifted children, received special attention.

TABLE 1—NUMBER OF EXCEPTIONAL CHILDREN RECEIVING SPECIAL ATTENTION

MAJOR CONTINUING PROBLEMS

Closer Coordination of Effort Among Workers in the Field of Elementary Education.—The joint conferences of workers in elementary education constituted a major step in the direction of bringing about closer coordination with regard to the different services available. However, this is a continuing problem and it will be necessary for all leaders in elementary education to become increasingly better acquainted with and to practice the procedures that will bring about more desirable group work in the local divisions as well as on a State-wide basis. This group work involves discovering and working toward the solution of the problems people face in developing programs for children in our elementary schools.

Personnel for the Elementary School.—The teacher shortage continues to be one of the most serious problems facing elementary education. For the year 1949-50, 2,912 substandard licenses were issued and of this number 2,609 were held by teachers in the elementary schools. The increased financial support and the provision of scholarships for prospective teachers are helping with the solution of this problem. The workshops for teachers in the local divisions are also sources of great help. However, it will be necessary for teachers themselves and the public at large to place a continuously higher valuation upon elementary school teaching as a profession in order to effect a long time solution to this problem. In addition to attracting more outstanding young people into the field of

elementary school teaching, there is the problem of finding and training qualified people to serve as elementary school principals, supervisors, and visiting teachers.

Overcrowded Classrooms and Double Shifts.—Along with the teacher shortage, the problem of extremely overcrowded conditions in classrooms is a very acute one. The lag in schoolhouse construction and the heavy increase in current enrollments are causing many school divisions to resort to double shifts in the elementary grades. This practice prevents desirable learning situations for many boys and girls during the critical foundation years of life.

Continuous Restudy of the Program of Elementary Education.—The amount of retardation and overageness in our elementary schools continues to be a serious problem and is a definite indication of a need for a careful re-examination of the program. In the year 1949-50, there were 11,894 children fifteen years of age and over enrolled in the elementary schools. There were 100,405 children who were two years or more overage for their grades. The cumulative effect of the retardation which occurs in the various grades is very revealing. In 1943-44 there were 84,457 pupils enrolled in the first grade. Seven years later those children who had made normal progress through our schools would be enrolled in the seventh grade. It is found that in 1949-50 only 49,515 were enrolled in the seventh grade. The decrease in enrollment in this group of pupils was 34,942 or 41.3 per cent.

These facts have significant implications for our instructional program and call for serious attention to the problem of examining and improving our purposes, procedures, and ways of working with children in the elementary schools. The members of the Division of Elementary Education have the problem of finding the best ways to help people in local school divisions study and improve their programs. The bulletins, The Characteristics of a Good Elementary School and Looking At Our Elementary School, have been distributed to help with this problem. The film on Elementary Education which is to be completed in 1950-51 will be another source of help. Visits in the field and participation in local workshops

are also being used to help with this problem.

Extending the Services of Special Education.—Budget limitations have prevented the expansion of Special Education Services. At present, the major portion of the budget is used for special classes for orthopedically handicapped children, instruction of homebound children, instruction in hospital schools, and assistance to a few divisions on the salaries of speech correction teachers. It has not been possible to meet the many requests that have been submitted by local divisions for assistance. Speech teachers are in great demand, and there is every indication that requests for assistance in this field will increase at a rapid rate. Many requests are received from teachers and supervisory personnel for assistance in meeting the problems of the so-called mentally retarded child and slow learner. It is believed that the school program should be arranged for all children so that those who are exceptional may have their needs met in the regular school program.

DIVISION OF SECONDARY EDUCATION

Purpose

The primary and continuing purpose of the Division of Secondary Education is to assist local school divisions with the improvement of instruction in the high schools. In concentrating on this primary purpose, the Division of Secondary Education has developed the following long-range objectives: (1) to encourage and stimulate the continuous evaluation and restudy of the program of secondary education in the State at large and in the local school divisions to discover evidences of progress and needs for further development; (2) to act as a service and resource agency in helping local school divisions in the continuous development of curricula which are based upon an understanding of the needs of children and of society; (3) to assist school divisions in providing educational opportunities for adults; (4) to stimulate the development of organized guidance services in all secondary schools and provide consultation services for out-of-school youth and adults; (5) to assist in coordinating the efforts of all professional personnel into a unified program of improving secondary education; (6) to provide leadership in developing educational policies which are of common concern to the secondary

schools of the State; and (7) to provide channels for clearance on matters of policy and procedure in relation to the office of the Superintendent of Public Instruction and his staff, and through which local school divisions can more effectively secure assistance on problems of local concern.

Scope

The staff of the Division of Secondary Education consists of a director; two supervisors; three assistant supervisors; four high school counselors; the members of the four Consultation Services located at Richmond, Danville, Norfolk, and Fishersville; and two regional supervisors of guidance. The staff has worked closely with the division superintendents, high school principals, directors of instruction, high school supervisors, and general supervisors as they have sought to improve the educational program in their respective divisions. Some of the more important phases of the secondary program on which the staff has worked continuously in achieving the objectives of the division are: (1) the comprehensive high school program; (2) the twelve-year school system; (3) the employment of supervising principals for twelve months; (4) accreditation of high schools; (5) guidance and consultation; (6) evaluation of high schools; (7) adult education and other projects; (8) follow-up study of graduates and drop-outs; (9) the high school completion examination; (10) General Educational Development Tests; (11) The American Council on Education Psychological Examination; (12) Southern Association of Colleges and Secondary Schools of Virginia; (13) school equalization cases; and (14) the improvement of instruction. A summary of accomplishments in each of these areas follows:

Accomplishments

The Comprehensive High School Program.—Members of the staff have worked with school divisions with reference to clarifying, refining, and implementing the concept of an adequate high school program. In this connection the staff has prepared calculations regarding capital outlay, adequate offering, personnel, and operating costs for high schools of varying enrollments. The staff has prepared also statements of space requirements and staff needs for specific comprehensive programs as requested by superintendents. Assistance has been rendered school divisions in establishing the cost of providing a comprehensive program in larger schools as compared with present costs of offering restricted programs in small schools. A number of divisions have developed comprehensive high school programs and many others are planning to do so as funds can be secured for buildings and adequate facilities can be provided for improved offerings and enlarged staffs. Some school divisions are developing cooperatively regional high schools.

The Twelve-Year School System.—Progress is continuously being made in the establishment of the twelve-year school system. Eighty-three of the one hundred twenty-five school divisions have or are in the process of inaugurating the twelve-year system. In those divisions that have or are in the process of inaugurating the twelve-year program are located two hundred seventy-eight of the five hundred thirty-five high schools in the State. The type of organization reported by 84 per cent of these schools is a 7-5 organization; namely, seven years in the elementary school and five years in the high school. The additional year has been developed as an eighth grade, which is the first year of the five-year high school. Emphasis is placed in this grade on developing basic skills, understandings, and appreciations; remedial instruction; opportunities for exploration; and systematic guidance.

The staff of the Division of Secondary Education has encouraged the development of a twelve-year system in the State at large and has worked with those divisions that have requested help in inaugurating the program to enable the

schools:

1. To do a better job of college preparation.

2. To provide a broad and varied offering, systematic guidance, the study and analysis of children, and the improvement and maintenance of the fundamental skills.

3. To provide for specialized offering to meet individual needs in:

a. Enlarged academic offerings

Practical and fine arts

c. Vocational fields

- 4. To have pupils with sufficient maturity to pursue these fields of speciali-
- 5. To provide for the great variety of needs of the total school population.

Employment of Supervising Principals for Twelve Months with State Aid.—An appropriation of \$226,000 was made available for the second year of the biennium to aid school divisions in the employment of supervising principals for twelve During the summer of 1949, three hundred and forty-two principals were employed on a twelve months basis with State aid by ninety counties and twenty-four cities, as compared with two hundred and twelve principals employed by seventy-six counties and twenty cities for 1945-1946, the first year of the program. Forty-one new schools were approved for the first time for the year 1949- $\bar{1}950.$

The purpose of this program is to assist school divisions in raising the administration, operation, and supervision of the schools to a higher level of efficiency. Improved organization and promptness with which the work of the regular session is begun, better planning of the entire program, supervision of school activities carried on during the summer months, enriched school-community relationships, and increased services of the schools to the pupils and communities are among the accomplishments listed by division superintendents in their reports.

Accreditation of High Schools.—For the 1949-50 session there were 419 accredited high schools, nineteen accredited junior high schools, thirty-nine certified high schools, six qualified high schools, and fifty-two unaccredited high schools. Early in the year the Preliminary Annual Report of each high school was reviewed and analyzed in terms of minimum accrediting standards. Schools were advised of existing deficiencies and a number of corrections were made during the year. Certain schools with rather pronounced deficiencies were visited or contacted by letter in an effort to assist and stimulate them to meet fully minimum stand-The program of accreditation has been used as a supervisory instrument in an effort to help each school improve its total program of education.

Guidance and Consultation.—Guidance in the school consists of an organized program whereby each individual is assisted in better understanding his abilities, interests, personality, and the situation in which he finds himself. The conditions under which this better understanding takes place should be arranged so as to enable the individual to make plans for achieving attainable goals in his educational, vocational, social, and personal life. The adequate program of guidance can only be achieved when it is actively supported and participated in by the entire school, the home, and the community. In order to carry forward this program of guidance, schools must use every opportunity to gain information about the individual. Such information is gained by interviewing, testing, home visitation, through the exploratory courses and guidance work done in the eighth grade program, in regular classes, activity programs, and from work experiences outside of school.

Persons assigned to the Consultation Services are members of the staff of the Division of Secondary Education and they work directly with the schools as well as with adults and out-of-school youth. During the year, 776 visits were made to 363 high schools by members of the Consultation Services. Among other activities, members of the Consultation Services conducted workshops and clinics in various colleges for teachers, counselors, and principals; assisted high school faculties in studying techniques of interviewing and counseling, interpreting test results, and organizing the guidance services; and published and distributed to all high schools the monthly bulletin, Work and Training.

Of 479 Preliminary Annual Reports studied, 402 schools reported that some time was provided in the schedule for individual guidance activities, 351 reported that the necessary space for guidance activities was provided, 398 showed that files of occupational information were kept, 434 schools provided files of educational information, and 315 schools provided in-service training in guidance for teachers.

In addition to the above services, staff members of the Consultation Services rendered consultative services to 340 individuals who visited the Consultation offices.

Evaluation of High Schools.—The Division of Secondary Education and the Research Service of the Division of Research and Planning assisted 38 schools in their evaluations by the use of the Evaluative Criteria as developed by the Cooperative Study of Secondary School Standards. In applying the Evaluative Criteria, 251 persons served on evaluation committees. The committees consisted of college personnel, superintendents of schools, principals, directors of instruction, supervisors, classroom teachers, a member of the Legislature of Virginia, and staff members of the State Department of Education. The Evaluative Criteria is regarded by many educators as a most effective instrument in the selfevaluation of a school and stimulating improvement. These criteria have been found to be highly valid and reliable on a national scale.

Adult Education and Other Projects.—During the year 1949-50 approximately 20.403 persons were enrolled in general adult classes for which some financial assistance was made possible by the State Department of Education. More than 2,749 individuals received assistance in making vocational plans.

Teachers were employed in tuberculosis sanatoria at Catawba, Blue Ridge, and Piedmont to assist patients with regular elementary and high school subjects, homemaking activities, current events, handicraft, and the like. Counseling has become an established service to the patients.

The Division continued to provide aliens who come to Virginia with materials

for their use in preparation for citizenship. The Bureau of Immigration sends to the State Department of Education the names of aliens as they arrive in Virginia. The Bureau also provides home study materials which aliens may use to prepare themselves for citizenship. These materials when distributed through the division superintendent's office to all aliens who requested them. This year, 87 aliens used these home study materials. In Roanoke City, Norfolk City, and Newport News special Americanization classes were in operation.

Follow-Up Study.—The findings of the recent follow-up study of graduates and drop-outs from the high schools for the year 1939-40 were tabulated and analyzed. Four hundred and eighty-five high schools participated in this study during the year 1948-49. The report of this study will be made available for distribution during the ensuing year.

High School Completion Examination.—During the year 1949-50, the High School Completion Examination was administered to 699 persons. Any person certified by the division superintendent as qualified was admitted to such examinations. This ordinarily included: (1) pupils who had finished or were finishing a good course of study in a public or private unaccredited or non-certified high school, and who had shown at least average ability; and (2) those who through some means apart from high school classes had acquired at least the equivalent of a high school education. These examinations were given in the offices of division superintendents.

General Educational Development Tests.—Five agencies were designated during 1949-50 and approved to give the General Educational Development Tests to veterans who can qualify. These agencies are located in Alexandria, Danville, Norfolk, Richmond, and Roanoke. A few veterans made use of this test-

ing service during the year.

A serviceman on active duty who completes satisfactorily the General Educational Development Tests may apply for a statement of high school equivalency through the office of the division superintendent or through the office of the high school principal. A serviceman who applies for this statement must have attended a Virginia school. During the year 1949-50 the Division of Secondary Education issued 178 statements of high school equivalency to servicemen upon request of the local school authorities and upon receipt of an official copy of the applicant's scores.

In addition to the above services, the staff assisted high schools in evaluating

applications for school credit made by servicemen and veterans.

The American Council on Education Psychological Examination.—The American Council on Education Psychological Examination was distributed to the high schools of the State to be administered to the seniors. The examinations were machine scored by the State Consultation Service, located in Richmond. The scores of each senior were mailed to his high school to be included as a part of his record.

The Southern Association of Colleges and Secondary Schools of Virginia.—Ninety-two high schools hold membership in the Southern Association of Colleges and Secondary Schools. More than a dozen new schools since applying for membership have met completely the preliminary requirements.

School Equalization Cases.—Members of the staff served as consultants to local school officials in several school equalization cases where pupils and their parents appealed to the court for equal educational opportunities and facilities.

Improvement of Instruction.—Members of the staff carried on systematic visitation to help teachers, supervisors, principals, and superintendents with problems of major concern in improving the school program of the respective schools and divisions. The staff participated also in many county meetings, preschool conferences, and meetings of district associations of high school principals.

The staff continued with the production of course of study materials in social studies, with particular emphasis upon Virginia History and Government. Tentative materials were prepared in a workshop at Longwood College during the summer of 1948. Two workshops, one at Virginia State College and one at Longwood College, were scheduled for the summer of 1950 to revise and further develop the materials prepared in 1948. In addition to the work in social studies, the staff began work on the production of course of study materials in mathematics. One workshop in mathematics was held at Virginia State College in June, 1950, and a second workshop was scheduled at the University of Virginia.

Use of the Statement of Plans and Progress was continued by accredited high schools as a basis for developing and improving the total school program. The

statement sets forth an outline of procedure which a school may use in studying pupils and the community, identifying needs and problems revealed by the study,

and planning for the solution of problems and the satisfaction of needs.

In the formulation of new policies or when any change is contemplated in present policies, it is the practice of the Division of Secondary Education to advise with committees in the field. A committee of college representatives, superintendents, principals, and laymen was appointed to make a thorough study of the present program of accrediting high schools. This committee held several meetings during the year and now has its recommendations in tentative form for presentation to the Superintendent of Public Instruction and the State Board of Education. The Advisory Committee of Secondary School Principals rendered valuable assistance to the staff of the Division of Secondary Education in planning the State-wide Principals' Conference.

Two State-wide conferences of high school principals were held during the year, one at Virginia State College, June 15-17, and one at the University of Virginia, June 19-22, 1950. The theme for these conferences was, "Fundamentals of Education for Democracy." In addition to these conferences the staff participated in several other State-wide conferences as well as numerous local

conferences.

Major Continuing Problems

- 1. How may we assist school divisions in developing a program of education with sufficient breadth and depth to meet the educational needs of boys and girls of high school age?
- 2. What are the most helpful services we can render to local schools in the development of organized guidance services?
- 3. How may we encourage and stimulate the inauguration of twelve years of public education by all school divisions?
- 4. What can we do to help local school officials in providing the necessary facilities and in securing sufficient personnel to develop adequately comprehensive programs of education?
- 5. How may we assist supervising principals employed for twelve months in administering and supervising the school and in studying the community?
- 6. What revision is needed in the standards for accrediting high schools that will apply to both public schools and those private schools which seek recognition?
- 7. How may we work with teacher training institutions and local school officials through pre-service and in-service training programs in securing a sufficient number of adequately trained teachers?
- 8. What curriculum materials should be prepared for use in the secondary schools and how may we assist local school divisions in developing curriculum materials?
- 9. How may we encourage more schools to become accredited by the Southern Association of Colleges and Secondary Schools?

*Sebools are not accredited until they have maintained the required standards for at least a year. Schools meeting the requirements for the first year are, therefore, Qualified rather than accredited. Schools which for special reasons are neither accredited nor qualified, but whose graduates are adjudged eligible to enter college, are placed on the list of Certified schools.

PRIVATE SECONDARY SCHOOLS ACCREDITED BY THE STATE BOARD OF EDUCATION, 1949-50

GIRLS	
Chatham Hall	Chatham, Va.
Fairfax Hall	Waynesboro, Va.
Foxeroft School	Middleburg, Va.
St. Agnes School	Alexandria, Va.
St. Anne's School	Charlottesville, va.
St. Catherine's School	Richmond, Va.
St. Francis de Sales School (Colored)	Rock Castle, Va.
St. Gertrude's School	Richmond, Va.
St. Mary's Academy	Alexandria, Va.
Stuart Hall	Staunton, Va.
The Madeira School	Greenway, Va.

Boys

Augusta Military Academy	Fort Defiance, Va.
Benedictine	Richmond, Va.
Episcopal	Alexandria, Va.
Fishburne Military School	Waynesboro, Va.
Fork Union Military Academy	Fork Union, Va.
Hargrave Military Academy	Chatham, Va.
Massanutten Academy	Woodstock, Va.
Randolph-Macon Academy	Front Royal, Va.
St. Christopher's School	Richmond, Va.
Staunton Military Academy	Staunton, Va.
Virginia Episcopal	Lynchburg, Va.
Woodberry Forest	Woodberry Forest, Va.
Woodberry Torost	

Co-Educational

Eastern Mennonite	Harrisonburg, Va.
Holy Trinity	Ocean view, va.
Oak Hill Baptist Academy	Mouth of Wilson, Va.
Our Lady of Nazareth	Roanoke, Va.
Our Lady of Nazareth	Koanoke, va.

Our Lady of Victory (Colored)	Portsmouth, Va.
Sacred Heart Cathedral	
St. Andrew's	Roanoke, Va.
St. Paul's	Portsmouth, Va.
St. Joseph's	Petersburg, Va.
St. Joseph's (Colored)	
St. Patrick's Academy	
St. Vincent de Paul.	
Shenandoah Valley Academy	
Viaud School	

CERTIFIED PRIVATE SECONDARY SCHOOLS

Blackstone College (Prep. Dept.)	. Blackstone, Va.
Christchurch	
Collegiate School for Girls	
Ferrum Jr. College (Prep. Dept.)	. Ferrum, Va.
Holy Cross Academy	Lvnchburg, Va.
Konnarock Training	. Konnarock, Va.
Marion College (Prep. Dept.)	
Miller School of Albemarle	Miller School, Va.
St. Margaret's School	. Tappahannock, Va.
Southern Seminary (Prep. Dept.)	Buena Vista, Va.
Stratford Hall	Danville, Va.
Stuyvesant School	
Sullins College (Prep. Dept.)	
Van de Vyver School (Colored)	
Virginia Intermont College (Prep. Dept.)	Bristol. Va.
Virginia School for the Blind.	Staunton, Va.
Virginia Seminary (Colored)	Lynchburg Va
riiginia commany (conorda)	. 11 Homourg, va.

QUALIFIED PRIVATE SECONDARY SCHOOL

Norfolk Academy	 	Norfolk, Va.

DIVISION OF RELATED INSTRUCTIONAL SERVICES

The Division is composed of certain special educational services that function through all phases of the instructional program of the school. These special services are Art Education Service, Bureau of Teaching Materials, Library and Textbook Service, Music Education Service, Health and Physical Education Service, and Film Production Service.

The purposes of the Division are as follows:

1. It brings into closer relationship the educational services that function primarily through the instructional program. This arrangement makes possible the development of common policies and procedures on such matters as in-service teacher education, cooperative planning with colleges on teacher education, and the interchange of information and experiences resulting from work with local schools.

2. It provides the opportunity for maintaining the necessary working relationships among State supervisors who are in charge of related services and those in charge of direct instructional services so that there is appropriate blending of their work into the total program. It also makes it possible for both groups to work together in developing educational policies

which are of common concern.

3. It provides channels for clearance on matters of policy and procedure in relation to the Office of the Superintendent of Public Instruction and his assistants.

4. It provides channels through which local school divisions can more effec-

tively secure assistance on problems of local concern.

Through the position of the director, it is possible to make available to appropriate authorities specific information concerning the activities being carried on.

HEALTH, AND PHYSICAL EDUCATION, SAFETY, AND RECREATION SERVICE

Purpose

The Health, Physical Education, Recreation and Safety Service is authorized by law to supervise and direct a program of health education and physical education for the public schools and teacher training institutions of the State. In addition, the Department has designated this service to supervise and direct the safety education program, including driver education and the school-community recreation program.

The principal function of the Health, Physical Education, Safety and Recreation Service is to assist school divisions and local schools in the development of their programs of health, physical education and safety. In addition, the service is responsible for preparing teachers' aids which can be used by local

school authorities in the development of these programs.

In-service teacher training, interpretation of materials, and practical demonstrations of program organization, planning and teaching techniques are examples of specific services rendered to school divisions.

Scope

The service renders State-wide assistance to public schools in all the counties and cities in the State. Every public school—both elementary and secondary—participates in the program of health education, physical education and safety education. In addition, six schools conduct a community recreation program, and fourteen schools participate in school-community recreation programs.

Every elementary teacher in the State has a responsibility in Health and Physical Education and a high percentage of high school teachers in the State also carry responsibility in either health or physical education or both. In addition, sixteen colleges conducting teacher training look to this service for assistance and guidance in the development of teacher training programs for the general teacher as well as the specialized health and physical education teacher.

Accomplishments

Health Education.—Emphasis during the year was directed toward more functional use of materials issued by the State Department of Education in health education. Schools were assisted in the implementation of their programs. As a result of the emphasis on health education, more schools are now offering well organized and positive programs of health instruction. Coupled with this increase is a decrease in the number of schools offering no health instruction. The State Department of Education has continued to work in close cooperation with the State Department of Health in the development of school health services for the children of the Commonwealth in twenty-one school divisions. The following table records growth and accomplishment in the area of health.

TABLE A COMPARATIVE DATA FOR SCHOOL HEALTH SERVICES AND HEALTH EDUCATION

	1948-49	1949-50
High schools offering two periods per week of health instruction. High schools offering one period per week of health instruction. High schools offering only incidental health instruction. High schools offering no health instruction. Schools having health councils. School divisions participating in joint Health Service Project.	274 101	101 39 242 61 53 21

Note.—It is generally recommended that two periods per week be assigned to health and safety instruction in all high school grades. The present regulation is one period per week.

Physical Education.—Physical Education programs are continuing to improve throughout the State. There is evidence that more schools are scheduling classes in physical education in the high schools according to grade and age of pupils, thus making possible a more careful planning and coordination of the program to meet pupil needs. There is also evidence the school divisions are providing more equipment for the conduct of physical education programs and in the high school are assigning specific teachers for instruction rather than considering the teaching of physical education as an extra responsibility for all teachers in the school. New school building plans indicate an awareness of the need for proper facilities for the conduct of a physical education program.

During the year the Health and Physical Education service, in cooperation with the Film Production Service, produced a film entitled "Physical Education Instructor." The film depicts desirable class organization techniques and procedures. The film has been very well received both within the State and outside the State. It is anticipated that it will find wide use for in-service teacher training

programs.

A workshop to produce teacher bulletins in physical education was held during the year with the result that some most challenging materials were developed for Virginia teachers. These new materials represent a revision of preliminary bulletins prepared at an earlier date.

Safety Education.—Driver education has been included as one phase of the total health education program and, accordingly, schools in the State have been able to include an offering in driver education as a part of the regular curriculum for all pupils. There was a continued increase in the number of schools offering driver education during the past year, although the number of schools providing cars for practice driving has decreased.

The Department of Education is cooperating with the American Automobile Association, the Department of State Police, the Governor's Highway Safety Committee, and the Division of Motor Vehicles in the implementation of the

driver education program.

Of particular significance in the Driver Education Program was the agreement reached between the Automotive Trade Association of Virginia and the State Department of Education. The Trade Association agreed through its

dealers to make automobiles available to high schools on a loan basis without charge for use in Driver Education Programs, and as a result it is possible for every school to operate a complete driver education program at a minimum cost to the school.

The 1949 National Traffic contest conducted by the National Safety Council rated Virginia first among the Southern States and second in the nation in traffic

safety education. This is the highest rating Virginia has ever received.

Safety education in the same manner as driver education has been included as a part of the total health education program and more effective instruction in safety is continually being realized.

TABLE B
DRIVER EDUCATION

	1948-49	1949-50
Number of schools offering the classroom instruction only. Number of schools offering complete course. Number of pupils completing classroom course only. Number of pupils completing classroom instruction and practice driving.	84 15,926	151 65 8,547* 3,826*

^{*}The number of pupils trained has decreased because during the first years of the program all pupils above the 9th grade were included in the program. Now that these have been trained only those in the 9th or 10th grade are being cared for by the program.

Recreation.—Personnel from the service serve actively on the recreation sub-committee of the Virginia Advisory Committee, for the study of Virginia economy. The supervisor in charge of the service has also been assigned responsibility for the development and the final report for recreation for the Midcentury White House Conference for Children and Youth.

In previous years the service sponsored an annual recreation institute which was held for the purpose of training recreation leaders in techniques of programs. This institute was continued for white workers and for the first time a similar institute was planned and held for Negro workers. Attendance at both institutes

was most gratifying.

Schools continued to request assistance and indicate interest in the development of school-community recreation programs. It is also of interest to note that an increasing number of requests for assistance by community groups for the development of recreation programs was reported by the service.

NEEDS FOR THE FUTURE

In thinking of needs for future emphasis in the field of Health, Physical Education, Safety, and Recreation the following phases of the program appear to need attention:

Development of school recreation programs. (1)

Development of school camping and out-door education programs.

(2) (3)Development of audio-visual aids by the department to use for in-service teacher training.

Development of some arrangement for credit for high school health and

physical education.

An increased number of trained teachers in health and physical education (5) for Virginia schools. This will require an extension of the training program in Virginia colleges and expansion within this program to increase emphasis in training for health education.

Additional assistance and guidance for schools in the development of (6) driver education programs. Additional supervisory assistance is needed in the State Department of Education to carry on this function.

TABLE E SUMMARY OF SERVICES

MUSIC EDUCATION

Purposes of the Music Education Service.—The program of music serves many purposes in the total school picture. It is first of all a closely woven part of daily school living as it is of out-of-school and adult life, making more complete other classroom activities and bringing into better focus many learning situations. It is, secondly, an activity which brings children opportunities for self-expression, for the development of another means of communication, and for fuller emotional and spiritual experiences. Finally, it serves and accompanies many other school activities such as athletics, school plays and other productions, school assemblies, and P. T. A. and other group meetings. The general purpose of the office of State Supervisor of Music is to stimulate the above functions of the music program and to encourage maximum participation of the greatest number of children.

Specifically, there are several purposes of the music education service:

1. To assist school divisions and colleges in securing the best possible program of music with the facilities and personnel at hand;

2. To advise with principals and superintendents on considerations such as the nature, organization, extent, direction, effectiveness, cost, and personnel of the music program;

 To supply help to teachers through visitation, observation, teachers' meetings, development of resource materials, and other means;

To help in organizing and carrying through desirable learning experiences

for teachers-conferences, workshops, and clinics;

5. To make recommendations concerning teacher certification in music, planning for new music facilities and equipment, education of veterans in music, and other matters.

Scope.—In any one year the music education service enjoys contact, in one or more of the above ways or through festivals and clinics, with all except a few school divisions of the State. The large majority of elementary school children and approximately one-fourth of all secondary school students are contacted either directly or indirectly by this service. More attention is given to those divisions where no music program or a limited one is in progress since the need is greatest there. An increase is being noted both in the number of divisions having a music program and in the number of children participating. During the year 1949-50, the music education staff visited 108 school divisions and 9 colleges in the course of the work with the music program. They attended both white and Negro conferences on elementary and secondary education, participated in 11 teachers' workshops in music, attended and participated in 10 music festivals and clinics, and had numerous conferences with principals and superintendents regarding the music program.

Accomplishments.—During the past year a coordinator in Music Education was appointed whose time is equally divided between teacher education in music at Radford College and field work in music education in Southwest Virginia. This makes possible, for the first time, concentrated attention to a small number of school divisions and more frequent visits to schools farthest removed from Richmond. This is an important step forward in the music program since it brings more concrete help to elementary classroom teachers in many communities where no music teacher is employed and no specialized music resource person is available.

In the course of the school year, plans were made with the University of Virginia for three two-weeks workshops in music education, one on the campus and the others in Roanoke and Portsmouth—centers which are easily accessible to large numbers of teachers. While many teachers cannot leave home responsibilities to attend summer school, they can arrange home duties so as to attend a workshop if it is close at hand. Other workshops in elementary school music were held at Radford College and at the Norfolk Division of Virginia State College. These offerings can be of great value in building a beneficial and functional program of elementary school music in many localities and can supplement and

stimulate the elementary education and music programs in our colleges.

The Eleventh Annual Music Workshop and Camp at Massanetta Springs included larger numbers of teachers and children from more school divisions than in any previous year. Four hundred and fifty-four students and 122 teachers attended, representing 64 Virginia counties and cities and also the States of North Carolina and Delaware. There was a noticeable growth over previous years, both in the musical power of students and in their general attitude and behavior. These growths are outcomes of the expanding music program in the State and help to substantiate its contribution to musicianship and its value in good living. The workshop was considered to be of sufficient value to teachers to merit recognized college credit, and arrangements were concluded whereby this credit was granted by Madison College. The instrumental music workshop and clinic for teachers and students which in the previous year was sponsored by the State Department of Education was this summer held at Longwood College. Participation of Virginia Colleges in summer music events is an important step toward achieving larger and more functional programs in teacher education in music.

Regional music festivals for white children were held in five centers and for Negro children in six centers in the State. State music festivals were held in Charlottesville and Petersburg. All these festivals included both instrumental and choral groups except the State Festival at Charlottesville, which was exclusively instrumental. The All-State clinic for string orchestra occurred in Richmond, and band clinics were held in Winchester, Radford, and Norfolk.

Approximately, 13,000 high school students and most high school music teachers participated in one or more of the festivals and clinics. A selected group of students from the Massanetta Chorus of 1949 came together on November 3 and 4, participated in four rehearsals, and presented a short concert for the final general session of the Virginia Education Association. Comments of adjudicators and clinic leaders, many of whom came from outside the State, indicate that musical achievement in our schools is high—at least as high as a national average, and that some of our musical events, notably the State string clinic and the Massanetta workshop and camp, are quite outstanding and unique.

Music teachers were employed and music programs initiated, during this fiscal year, in three more school divisions. Also, there were correspondence and conferences with a number of other school divisions relative to beginning a music program next year. Thus progress is being made toward music in every school, a goal which is recognized as desirable by most administrators and other

school workers and by the public at large.

Special certificates in Applied Music were awarded to five candidates as a result of examinations conducted in August. By this means private teachers

are accredited and their work is assured recognition by the schools.

The music teachers in Virginia schools work as a closely knit group and are collectively working toward accomplishment of the objectives of music education. A few teachers have played a major role, and many others have had smaller parts in the above accomplishments. The professional efforts and achievements of these teachers are most commendable and should be afforded recognition.

Problems.—One problem continues to be the lack of adequate programs, within the State, for the preparation of music teachers. The kind and extent of this preparation, while showing growth, is not commensurate with teacher needs in actual school situations. There is also need for graduate programs in music education. A related aspect of this problem is the difficulty of securing enough music teachers to meet the needs of Virginia schools.

Another problem is that of securing, in many schools, sufficient and suitable materials and equipment. There is particular need for music books, records and phonographs, and pianos. Without these it is exceedingly difficult, if not

impossible, to achieve even a minimum music program.

A problem which perhaps must always be faced is that of getting elementary classroom teachers to include music in the regular classroom program and teach it to the best of their ability. Colleges are interested in their role in this problem and are helping to work toward a solution. A continuing, long-range, cooperative program of teacher education, both preparatory and in-service, is vitally needed. Certainly in-service activities, with a view to concrete classroom situations and to real needs, are of great value and should be encouraged.

ART EDUCATION

Purpose of the Art Education Service

The essential purpose of the Art Education Service is to develop with all school personnel and interested art and lay groups the concept of art education as creative, selective activity which brings quality and meaning into personal and group living, with the added understanding of art as a learning process. Art education is important for all people, both children and adults, because it is through art activity that man's inner resources and creative powers are released. Moreover, art is meaningful to man because people think, work, and live best in an organized and beautiful environment which can be made possible only through selective art activity. It is our purpose, therefore, to interpret art as such an indispensable part of an integrated and total school program that the children and youth in our public schools and colleges will become truly expressive and communicative through art activity; that through art appreciation they will learn to see, recognize, enjoy, and use art in all its manifestations; that through an integration of art with other subject matter fields greater interest and learning may be effected in both; and that because of these enriched experiences through art, our people may come to a general recognition of the value and potentialities

of human and environmental materials and resources and may be aesthetically and spiritually affected thereby.

Scope of Work

In order to accomplish the above-mentioned objectives, it is necessary to divide the work of the Service into different areas of activity. Important among these are the interpretative and coordinating activities which work for the promotion and unification of the best efforts of all those groups in the State—school, museum, and civic—interested in providing enrichment through art experiences for all the people. Cooperative planning with school divisions and teacher education colleges with regard to pre-service and in-service training constitutes another significant area of our work as well as the production and distribution of instructional material. Our Service also attempts to serve as a clearing house for the circulation of information with regard to new ideas and developments in our field which demands active and continuous interest in professional growth among the members of our staff.

The work of the Supervisor and Assistant Supervisor of Art Education covers the broad area of the State in that they render supervisory and other assistance on request to the public schools, colleges, museums, and civic groups in the 100 counties and 25 cities of Virginia, the Supervisor of Art Education giving emphasis to the work in the white schools and her Assistant to that in the Negro schools. The Regional Art Consultant, however, who is the third member of the staff, works on a half-time basis with the promotion of art education in nine county divisions surrounding Longwood College where she also serves as a member of the Art Department. In this restricted area, her work with the public schools, although similar in nature to that of the Supervisor and Assistant Supervisor of

Art Education, can naturally be of a more detailed and specific nature.

The larger part of our work being concerned with in-service training in the public schools, it is well, perhaps, to indicate the kinds of assistance given to local school divisions. These include interpretation of the field of art education in its broad implications for teaching and learning; observation and evaluation of elassroom activities followed by discussion, comments, and suggestions to children, teachers, and administrators; service as leader in discussion groups; demonstration of teaching procedures through visual materials; work with small committees organized locally; evaluation of children's art exhibits in terms of philosophy, technique, and future teaching procedures; preparation, distribution, and interpretation of written instructional materials; assistance with regard to information on materials, equipment, and professional books and magazines; guidance in selection of materials and equipment; recommendations with regard to needed facilities, budgets, and well-qualified personnel; promotion of in-service training through help in establishing extension courses and art workshops; and service as consultant in varied group meetings.

During this year a total number of 145 visits were made to school divisions in the accomplishment of such supervisory assistance; our staff also participated in 31 pre-school and after-school conferences, made 24 visits to workshops, made

57 visits to colleges, and 21 visits to museums.

A recent appraisal of the present situation with regard to the development of art education in our schools shows that while we have 103 art personnel working in the 25 cities of Virginia, we still have only 85 art personnel working in the schools of our 100 counties which constitute the larger part of our State. However, we must evaluate our phase of the total school program not in terms of art personnel which represents the negative aspect of the appraisal, but rather in terms of the growing awareness of art as a part of general education, with acceptance of responsibility for the promotion of art education by all school personnel. More and more, administrative staffs and classroom teachers are assuming the initial responsibility for the promotion of art education and are coming to regard art personnel as resource people to assist general educators in meeting the art needs of children and youth. This growing awareness of the importance of art education is a result of the establishment and continuance of organized study groups in art, art workshops, school art committees, P. T. A. meetings concerned with art, stimulation afforded through art exhibits, use of local and State art resource people in interpretating art education, and art objectives established by federations of women's clubs, museums, and art associations. As interpretation broadens, art personnel is becoming more numerous, having increased in the last year from 54 to 63 in the elementary schools and from 69 to 86 in the high schools.

Outstanding Accomplishments for the Year

Perhaps the most outstanding accomplishment of the year has been the establishment, on an experimental basis, of the position of Regional Art Consultant, a cooperative arrangement with Longwood College which affords the Service the half-time assistance of the consultant, who is a member of the Art Department there. Preparatory to the initiation of this service, started in order that more concentrated service might be given in nine school divisions surrounding Farmville, the superintendents of schools in the designated area were told about the proposed service and asked to consider whether or not they wished it carried on in their divisions. Following an expression of desire for the service by all these superintendents, a meeting was held at Longwood College, at which time the Supervisor of Art Education and the Regional Art Consultant described the cooperative nature of the service, asked for suggestions as to how she might be used most effectively, and made general plans for the institution of this work. Although the Regional Art Consultant has rendered the supervisory assistance outlined under "Scope of Work," in her capacity as a liaison person working cooperatively with the State Department of Education, a teacher education college, and the public schools, her work has served the additional purpose of bringing all these closer together in their concentration on teacher education and public school needs in art education. Evaluations of this service by the superintendents and their staff members indicate the value of this arrangement and the strong desire for its continuance. Moreoever, two additional school divisions, which have requested the service, will be added to this region for the coming year.

Another highlight of this year's work was the publication by the Related Arts Service in New York City of "A Visual Presentation of Art Education in

Another highlight of this year's work was the publication by the Related Arts Service in New York City of "A Visual Presentation of Art Education in Virginia," a six-page leaflet describing the Service. It is interesting to note that this graphic outline of the work in Virginia has had national distribution to all the school superintendents and art educators throughout the United States; and comments received either personally or through correspondence reveal its wide acceptance as a basic approach to art education both in our own State, where it is being used by workshop and other groups, in the U. S. Office of Education, and in major teacher education colleges and public school systems.

A third achievement of the Service was the promotion of the first Festival of the Arts held in Abingdon under the joint sponsorship of the State Department of Education, the Barter Theatre, and the artists of southwest Virginia. Financial assistance, given by the Music and Art Services of the State Department of Education, represented the principal support which made possible a distinguished though small assembly of artists, educators, and lay people who discussed the significance of the arts in contemporary living and also participated in the various events represented by the fields of painting, the dance, architecture, drama, ceramics, weaving, and poetry. Such was the stimulation of interest in the arts afforded by this momentous event that the second annual Festival will open in Abingdon on August 12 with an expanded program.

Integration of art and varied art activity with the State-wide Conferences on Elementary Education held at the Roanoke Hotel and at Virginia Union University might be said to constitute another major achievement for the year. It seemed to indicate that the concept of art as an essential part of general education had at last been completely accepted and regarded as something without which the conferences could not be successfully carried on. As coordinator of exhibits, the Supervisor of Art Education and the Assistant Supervisor of Art Education worked both with the various services of the State Department of Education and program participants in general education in an effort to assemble and display work through art objects and lettered posters which would enable these exhibits to function as an integral part of these conferences. Time was also provided on the programs for several meetings, at which time art might be both enjoyed and studied with regard to public school needs.

Still another important development of this year's work has been the production of visual material made from art work which we have deemed to be superior. In this enterprise, we have been admirably assisted by the Film Production Service. Kodachrome slides for demonstration use were made from the work of Turkish children, an exhibition lent by the Department of State in Washington through the U. S. Office of Education. Other slides were made from an exhibition of the art work of Richmond children which was displayed at the Valentine Museum, of the Children's Book Illustration Exhibition held at the Virginia Museum, and from the original work of students in the Thomas Jefferson High School. In addition, we were permitted to reproduce films and slides from Phoenix High School from work showing an integration of the arts. This venture into the realm of producing our own visual aids has enabled the Service to fulfill its needs for such material at a very nominal cost. It should also be mentioned that the Service is in the preparatory stages of making a film of Maury School, which will attempt to portray art as a way of life.

With regard to long-term achievement, it is hoped that the Service has, in some small measure, influenced the large number of art workshops being given throughout the State this summer; also the concentration being given to art education in many education courses and general education workshops in our colleges. The revelation of this emphasis on art and the creative process has been one of the most reassuring signs that at long last the real significance of

art in education is being recognized.

Major Continuing Problems

The major continuing problems revolve around the need for still wider interpretation of the meaning of art in education and its significance for child growth and development; the dire need for more art resource personnel in the counties, there being none in 75 counties or the larger part of the State; the necessity for a wider and more varied art offering on both levels of instruction; the need to emphasize the development of high school art departments; some better means of stimulating the school divisions to provide good working facilities, materials, and equipment; an in-service training program for art resource personnel entering our schools; and better and more consistent use of evaluative criteria for measuring

outcomes and progress.

On the positive side, it has been mentioned that school personnel in ever larger numbers are participating in summer art workshops, which are now numerous enough to care for our needs; that as interpretation broadens art resource personnel are being added. It is also true that in a large number of schools on the elementary level the offering is being greatly expanded but there is still the important need for development on the high school level. However, regardless of the difficulties and limiting factors being encountered, it is believed that general educators throughout Virginia are more alert than ever before to the possibilities of art as an educative force and as creative education; also that school personnel in rapidly increasing numbers are seeking opportunities both for interpretation and creative experience in the arts.

LIBRARIES AND TEXTBOOKS

Purpose

This Service encourages and gives general supervision, (a) to the development of a State-wide public school library program based on the employment of the librarian as a teacher and the use of the library as a teaching agency. The ultimate purpose is to encourage the training and employment of librarians who, as teachers, will develop public school libraries as teaching agencies of vital importance. Such librarians will assist teachers, students, and adults in their school and community programs for work and recreation; they will provide reading guidance, ample reading materials, and actual library experience for individual elementary and high school students; and they will stimulate informed interest, active support, and regular use of school libraries by students, teachers, and people of the communities, (b) to the establishment and successful operation, with State-aid, of county and city free textbook systems; and to establish business-like procedures in the selection, purchase, care, and use of State adopted textbooks by local school boards.

Scope of Work

State supervision is carried out by visits of members of the staff to local school libraries to offer suggestions for adequate floor space; for the employment of trained librarians; for the selection, purchase, organization, care, and use of all kinds of teaching materials; and for the selection, organization, and training of library pupil assistants. Lists of approved books and other teaching materials are prepared and distributed; library materials are purchased with State-aid; bulletins and articles are prepared for publication; librarians are nominated for positions; and materials and memoranda are distributed to Virginia public school officials. Professional books are loaned from the State Board Library to people employed in public education throughout Virginia. State-aid free textbook systems for public schools are encouraged; details relating to textbook contracts with the publishers are handled; and local school boards are advised about the purchase, distribution, and use of State adopted textbooks.

Accomplishments

Personal Visits to Schools.—The supervisory staff of this Service visited 502 school libraries in 99 counties and 17 cities, and by talking with the librarians and principals promoted better working relationship with this Service. Assistance was given the librarians in: (1) selecting and processing materials, (2) reading guidance and library instruction, (3) organization and operation of local library clubs, (4) preparation of records, and (5) filing fugitive materials.

Public School Librarians Trained at Thirty Institutions.—The training data supplied by 344 librarians employed in Virginia Public Schools, showing that 244 attended 8 Virginia institutions and 100 attended 22 out-of-State institutions, are arranged in descending order:

TABLE 14—EXPENDITURES FOR BOOKS, TEACHING EQUIPMENT AND MATERIALS FOR VIRGINIA PUBLIC SCHOOL LIBRARIES—SCHOOL LIBRARIES AND TEXTBOOKS SERVICE

New Elementary School Book List Distributed.—The State Board of Education Bulletin, List of Books Suggested for First Purchase for Virginia Elementary Schools, 4th ed., rev., Vol. XXXI, No. 4, January, 1949, which has been distributed by this Service to public elementary schools, has proved to be a valuable library tool for use in organizing libraries in these schools. In addition to the State law and standards, it includes a list of 2,311 carefully selected titles. The book list in this bulletin is widely used as a guide for purchasing and preparing for circulation basic collections of library books. Books for slow readers are indicated. An author, title, and subject index, with subjects printed in heavy type, is a handy aid to librarians and teachers when selecting titles of books needed in all subject fields.

Librarians Share in State Evaluation Program.—The trained librarians in Virginia public schools are assisting with the State-wide High School Evaluation Program. In cooperation with the Division of Secondary Education, the Supervisory Staff of this Service and twenty-nine public school librarians helped to evaluate thirty-eight high schools.

Lists of Books, Audio-Visual Materials, and Magazines Distributed.—Packages of 1950 printed and mimeographed order forms listing 14,754 approved titles of books and other library materials for purchase with State-aid for Virginia Public School Libraries were distributed to the division school superintendents in April. Sample copies of books included on these lists were reviewed and selected by the members of the State Elementary Materials Committee and by 95 professionally trained school librarians. This Service ordered \$208,000 worth of books and other library materials during July, August, and September, 1949. These new materials were put in circulation at the beginning of the school year.

Selection and Purchase of Encyclopedias.—Schools should limit the purchase of encyclopedias for Virginia public schools to those approved in Superintendents Memorandum No. 2329, May 20, 1949. Sets should be kept up-to-date by the purchase of yearbooks. This procedure is necessary to reserve funds needed for the purchase of other library materials.

Professional Books Loaned to Teachers.—The Library of the State Board of Education continued to lend professional books to individuals employed in public education living anywhere in Virginia. This lending of professional books is supplemented by the libraries in six State colleges and the University of Virginia. These libraries received \$3,256.67 worth of professional books donated by the State Board of Education. These books were loaned to local study groups in the respective areas of these colleges and the University.

Public Schools Borrow Books from the Virginia State Library.—During the year, the Extension Division of the Virginia State Library loaned 5,050 volumes to elementary schools and 750 volumes to high schools, or a total of 5,800 volumes.

Free Textbook Systems in Operation.—State-aid to establish or to operate free textbook systems was distributed in the total amounts of \$90,452.70 for 1948-49 and \$95,381.10 for 1949-50 to the following counties and cities: Arlington, Chesterfield, Elizabeth City, Henrico, James City, Nelson, Norfolk County, Shenandoah, Hampton, Hopewell, Newport News, Norfolk, Portsmouth, Richmond, South Norfolk, Williamsburg, and Winchester.

Continuing Problems

This Service will continue to give major consideration to:

1. The establishment of central libraries in elementary schools which will meet State standards.

2. The employment of more trained librarians in public schools.

3. The purchase of more books and other library materials for public schools with additional State-aid funds.

4. The proper growth of the Library Science Departments at Madison, Longwood, and Radford Colleges.

5. The recruitment of large numbers of dynamic high school graduates and college students who will train themselves to become public school librarians.

6. The establishment of more county public school circulating libraries for service to all residents in counties not served by public libraries.

7. The use of bookmobiles in more county public school library systems.

8. The employment of librarians for a 12 months' term in all public schools where the principals are employed for that period, in order that the communities may be served and new library materials processed during the summer months.

BUREAU OF TEACHING MATERIALS

Purpose

It is the function of the State Bureau of Teaching Materials and the four Regional Bureaus of Teaching Materials to aid the public schools of Virginia in making effective use of teaching materials as a means of improving instruction. This is accomplished through providing directly certain material for classroom use; encouraging and assisting school divisions and individual schools to acquire, distribute, and use certain teaching materials; suggesting kinds of facilities in divisions and schools which will result in the improved use of various teaching materials; and teacher education in improved use of materials.

Scope

Teaching materials in the broader sense refers to any material used by teachers that promotes pupil learning; including even the use of the environment through field trips, or objects and specimens brought into the classroom for instructional purposes. This report is primarily concerned with those materials falling more specifically in the audio-visual areas (such as, motion pictures, filmstrips, slides, recordings, transcriptions, etc.) as they are the direct responsibility of this Service. Information relating to use of other materials (such as, text and library books, and similar publications) are to be found in other sections of this publication.

Approximately 1,740 schools which include over 85 per cent of the total State school enrollment, booked 137,824 educational motion pictures from the State, Regional, and Division Teaching Materials Centers for use in their respective classrooms during the 1949-50 school year. In addition, many films were booked from other sources; such as, commercial film distributors and others. Since reports show that the average film is used about two and one-half times per booking, it is estimated that more than 300,000 showings were made to a school audience of more than 12 million pupils. This means that the average Virginia pupil saw more than 20 films as a part of his class study during the year. These materials were used in all areas of the curriculum and on all levels from primary through adult education classes. In addition, reports show that the use of filmstrips in many divisions exceeded that of educational motion pictures. At the same time the use of educational recordings was perhaps even more extensive.

At the present time 82 divisions have their own Teaching Materials Centers. These centers have a total of 10,418 prints of educational motion pictures which were booked a total of 77,295 times. (See table 16.) Many of these centers also circulate filmstrips, recordings, charts, models and other materials.

Accomplishments

The following are some additional accomplishments of this service during the current year:

A. Revision and distribution of the bulletin, *Educational Motion Pictures* for Virginia Public Schools. This bulletin was revised to correlate films with specific areas of the curriculum from primary through secondary levels.

B. Publication of the bulletin, Motion Pictures for Teacher Education, for

use in both pre-service and in-service education programs.

C. Increased use of motion pictures in teacher education. Bookings of teacher education films totaled 2,132. A number of additional prints of these subjects have been added to both State and Regional Bureaus to meet increasing demands in these areas.

D. Amendment to Minimum Requirements and Standards for School Buildings to provide for use of projected materials in all classrooms in new school buildings. This was amendment to Section IX, "Classroom Lighting" passed by State Board of Education November 9, 1949

Lighting", passed by State Board of Education, November 9, 1949.

E. Teacher education in the use of audio-visual materials, conducted by Virginia institutions of higher education, included a reported total of 1,651 students. Of these 603 attended regular audio-visual classes, 616 attended summer audio-visual classes, and 319 attended audio-visual workshops. Another 113 received training through extension classes.

Problems

Following are some of the major problems on which future improvements in the use of teaching materials depends:

1. The need for increasing the improved offerings of materials from division centers as well as from State and Regional Centers.

2. The need for improving the administration and supervision of teaching materials and their use in local divisions and schools.

3. The need for improving facilities for distribution of materials in many

4. The need for improving facilities for using materials in the individual schools.

FILM PRODUCTION

Purpose

The Film Production Service has for its purpose the production of educational motion pictures on historical objects, sites and scenes, and natural resources of Virginia, and on other subjects of importance to education and other governmental services.

Scope of Work

In carrying out its purpose the Film Production Service produces educational

motion pictures, slide films, stills, and recordings.

The Film Production Service engages in the following activities in the production of motion pictures: makes surveys and research on subject matter; writes the story; photographs the picture, does art and animation; writes the commentary; records voice and music on films; and edits the picture and sound track. Also, recordings and photographed stills are made State-wide of special events, such as speeches, music, and special educational activities.

In the production of films, technical advisors in the subject area being treated

are used in order to establish correct purposes and accuracy of detail.

Accomplishments

To date the Service has released 17 educational motion picture films and innumerable film strips, slides, stills, and recordings. Released film titles are contained in bulletins and memorandums distributed by the State Department of Education to local school leaders. The staff has served as technical advisors to many individuals and local groups that are developing local film materials. The following films are in various stages of production:

Pines from Seedlings School Bus Safety Wilderness Road

Elementary Education Safety Survey of Power Lines School Safety Patrols

Subjects on which research has been started include:

Soil Conservation Water Resources Mineral Resources Representative Government-State, County and City

Virginia historical characters, such as Madison, Mason, Marshall, Monroe, Bacon and Lee.

Major Continuing Problems

The request for films by the various government services will require approximately five years to produce. It is a continuing problem of the Service to maintain a production schedule that represents a balance among the kinds of films being used and the urgency of the demand for them.

DIVISION OF VOCATIONAL EDUCATION

Vocational Education is that part of the public school program in which the major emphasis is upon providing educational experiences in making a living, citizenship, and home and family life. Its offerings broaden materially the educational service which the community provides for its youth and for those

adults who recognize their need for further preparation in their chosen occupations.

In the current school year 108,432 or 73 per cent of the students in the high schools of the State were enrolled in one or more vocational courses. There were, also, 100,595 adults in organized vocational programs. There is reason to believe that we are moving steadily toward the day when most high school curricula will include such vocational offerings as may be required to meet local needs of young people and adults in agriculture, homemaking, distribution and, to a great extent, in the trades and in office occupations. In a state with the predominantly rural

characteristics of Virginia, however, there is much technical and vocational training needed in some of the trades and in some office occupations which cannot be provided economically within commuting distance of all who require this. Progress is noted in the development of a limited number of regional technical schools whose offerings are available to those whose local schools cannot provide the type of training they require.

Educational requirements pre-requisite to the study of law and medicine and stenography and barbering are different. Vocational Education recognizes this. It encourages the acquisition of the broadest possible academic background, but it intends to bar no student from pursuit of a wisely chosen vocational program if his level of academic attainment is adequate to justify the prediction of suc-

cessful performance in the training and adjustment in the occupation.

The Division has responsibility for other services in addition to those named above. One of these is the rehabilitation of persons seriously disabled by accident, disease, or congenital conditions. For an average per capita cost of \$432.00, 1,289 disabled persons completed their preparation and went to work during the year in occupations suited to their remaining abilities. In their first year after rehabilitation they earned \$1,748,700.00 and supported 2,187 dependent members of their families.

Another service inspects and approves schools and other institutions offering training for veterans, supervises on-the-job training of veterans in business establishments, and assists in making available to these veterans supplementary training related to their job experiences. There are 235 institutions and 6,610 busines establishments approved for such training. The Division also administers the Virginia World War Orphan Education Act which provides assistance in the education of children of World War veterans whose service-connected disabilities have resulted in the veteran's death or permanent and total disability. There is also a service responsible for the acquisition and distribution to schools and other educational institutions of equipment declared surplus by agencies of the Federal Government and considered to have educational value. In the year, equipment valued at \$2,207,815.21 was acquired and distributed.

The following are more detailed facts concerning various services in the Division of Vocational Education:

AGRICULTURE

Vocational education in agriculture is designed to fit farm persons for the type of farming they are desirous of pursuing. The individual and his needs as well as the particular type of farm he decides to operate are very carefully considered in the development of managerial and operative abilities necessary for success. Teaching consists of intensive and practical classroom instruction based upon a supervised farming program of sufficient scope to provide practical experience in the business of farming.

In all types of instruction the pupils carry out on their home farms a program of supervised farming with the assistance and supervision of the teacher of vocational agriculture. The program of vocational agriculture in the high schools of the State offers a broad field of service, since it is designed to provide instruction

for the three existing groups, classified into types of classes as follows:

- 1. In-School Boys.—Farm boys who are enrolled in high school and expect to enter the occupation of farming. Such classes are referred to as all-day classes. In many schools where vocational agriculture is taught, a number of farm boys drop out before they reach high school. In a large number of cases, these boys remain on the farm. An effort is being made to provide a type of training to meet the needs of this group. As a result, instruction is offered in agriculture and farm shop in some elementary schools with the hope that these boys will remain in school for a longer period.
- 2. Young Farmer Classes.—For young farmers out of school, now farming or seeking placement in farming. Such classes are designed particularly to assist young men to become established in farming and are designated as:

- Part-Time Classes.—For farm boys (non-veterans) who are out of school, now farming or desiring to become established in farming and want additional training in agriculture.
- Institutional On-Farm Training in Agriculture.—For veterans of World War II desiring to become re-established in farming.

At the end of this fiscal year, 367 white and Negro institutional on-farm training classes were in operation as compared with 280 on the same date last

Year.

The following summary shows some of the outstanding accomplishments

made by veterans enrolled through May 31, 1950:

Farms purchased	608	Items constructed in farm	
	2,317	shops	16,180
Renters	1,332	Items repaired in farm shops.	45,145
Partners	1,043	Houses landscaped	921
Milk cows procured	7,580	Home orchards established	1,834
Beef cattle procured	8,424	Acres of pasture developed or	
Breeding hogs procured	6,780	improved	92,761
Feeder hogs procured 3	34,659	Acres of land terraced	4,632
Broilers marketed2,20	2,992	Farm tractors purchased	1,518
Pints of food canned	2,950	Other items of farm machin-	
Soil conservation plans	3,226	ery purchased	13,043
New homes constructed	540	Acres of forestry improved	11,192
New farm buildings con-		Dwellings repaired	2,317
structed	3,701	Installed electricity	1,176
Houses painted	1,270	Installed running water	590

Never before in the history of vocational agriculture has there been a greater opportunity to teach agriculture to young farmers on a truly vocational basis. These men have already selected their vocations and are now in their life's work. They are eager to learn and are not only willing, but anxious to accept sound and better methods which will improve the economic and social status of themselves and their families.

- 3. Farm Families.—Adult farmers and farm women, who are interested in improving their farming conditions by attending group discussions and carrying out at home the recommended improved practices, become members of evening classes. These evening classes are held throughout the year at the convenience of the patrons. These classes include:
 - Evening Classes.—For farm men and women devoted to discussions of production, conservation, and marketing of farm products.
 - Farm Machinery Repair Classes in Vocational Agriculture Shops .-Provide instruction in the operation, repair, and construction of farm machinery and equipment. The following facts indicate the progress and accomplishments in farm mechanics during the year 1949-50:

No. farm machinery repair classes	204
No. home farm shops established by vo-ag boys	686
No. boys improving farm shop facilities at home:	2,841
No. in-school boys who repaired or constructed farm machines	
and/or equipment	8,392
No. adult farmers who repaired or constructed farm machines	
and/or equipment	13,151
No. implements rebuilt by in-school boys	6,687
No. implements rebuilt by out-of-school persons	8,144
No. implements overhauled by in-school boys	2,689
No. implements overhauled by out-of-school persons	5,589
No. implements repaired by in-school boys	18,577
No. implements repaired by out-of-school persons	36,065
Total farm implements rebuilt, overhauled and/or repaired	77,751

- c. Production and Conservation of Food.—The school community food conservation program has been planned from its inception to:
 - (1) Aid farm families in determining the kinds and amounts of food needed for an adequate and well-balanced diet.
 - (2) Teach patrons the latest improved practices for producing food.
 - (3) Teach patrons conservation of food according to improved methods in order to get a quality product.
 - (4) Teach the uses of canned foods in a well-balanced diet. The cannery program continues to render a splendid educational service and yet the opportunities for development in this program are still great, especially in educating the farm families and others to realize the importance of adequate diet throughout the year, the need for planning the food budget, growing the foods needed and conserving foods of good quality and using them effectively.

Many school community canneries showed surprisingly substantial increases in 1949-50 over former years in quantity of products canned and number of persons enrolled. Canneries are being adapted to can in glass—heretofore, only metal containers could be used—which should reduce the cost to patrons by a considerable amount and thereby encourage more farm families to participate in this phase of the vocational education program in agriculture. During 1949-50 (the 1949 canning season), 38,861 farm persons, mostly women, studied the latest practices of preserving foods in food conservation classes while processing 4,566,141 pints of foods for home use.

Future Farmers of America

New Farmers of America

The Future Farmers of America (for white boys) and the New Farmers of America (for Negro boys) are the national organizations of high school boys studying vocational agriculture. The programs of these organizations are integral parts of the program of vocational agriculture providing an opportunity for leadership training of farm youth to assume responsibility for community improvement.

Membership in the Virginia Association Future Farmers of America last year reached its highest post war total of 7,590; only 498 under the all-time high of 8,088 reached in 1942. With 319,261 members in the nation the FFA is the largest farm boy organization in the world. The New Farmers of America has 2,440 members in Virginia and approximately 29,000 in the nation, most of whom are in the Southern States. Each organization is an important part of the high school program in vocational agriculture offering an opportunity for leadership training and experience.

A Virginia FFA boy was named Star Farmer of the South last year and two other Virginia Farmers won the 12-States Southern Region award in farm electrification and soil conservation respectively. During 1949-50, for the first time in the history of vocational agriculture, two Virginia schools in one year were awarded top honors in the national FFA chapter contest and their instructors of vocational agriculture given the honorary American Farmer degree—the highest FFA award—in recognition of this accomplishment.

Virginia NFA boys took second national leadership award honors; third national dairy farming, farm mechanics and farm and home improvement awards.

BUSINESS EDUCATION

I. The Purposes of the Business Education Service

A. In-School Program:

The primary purpose of the Business Education Service is the improvement of instruction in the business education subjects in the public high schools. This objective is realized chiefly through the following activities:

Observation and individual conferences with teachers a.

Area conferences and workshops dealing with major problems in business b. education

A post-graduate professional training at V. P. I. and extension courses c.

in various centers of the State

Working in close cooperation with the business teacher-training programs d. at State supported colleges on the under-graduate level

Writing or compiling and distributing courses of study e.

Collection and dissemination of information through correspondence and the Virginia Business Education Bulletin

Advisory services to superintendents, principals, directors of instruction, and other administrative personnel.

B. Post-High School Programs:

The Business Education Service also assumes responsibility for post high school and adult extension training consistent with the needs for occupational training in the various phases of business education. The adult extension program is designed to provide training on the following levels: initial preparation for business jobs, upgrading, and retraining.

The Business Education Service is concerned with the improvement of all the educational facilities in this field. It recognizes the distinctive services of the private and parochial business schools and departments and makes available to these schools advisory services upon request.

Scope of the Business Education Service II.

The Business Education Service seeks to provide continuing service to the 348 schools offering full programs of business education and to approximately 100 schools that offer only partial programs. Every school division in Virginia with the exception of three, maintains schools having programs of business education thus necessitating travel to every geographical area. The following tabulation will indicate the general scope of business in the secondary schools.

STATUS OF BUSINESS EDUCATION IN THE PUBLIC SCHOOLS OF VIRGINIA, 19501

Vocational Office Training Program

A function of every business education program in the public schools of Virginia is that of training for job competence for those students enrolled in such skill courses as are offered in the school. It is recognized that good occupational training is given in many small high schools as well as in larger high schools. It is the responsibility of every school to provide vocational training in the business field consistent with facilities and local demand for trained workers.

Part-Time Cooperative Program.—Part-time work experience when properly administered is an approved educational procedure and is recommended for inclusion to the fullest practicable extent in the Business Education Department. The policy of granting special vocational aid to establish vocational office training programs in certain schools which meet prescribed conditions was instituted in 1947 in seven schools. Since that time, it has been emphasized that vocational office training is an integral or regular part of the total Business Education program of these schools. The teacher-coordinator of the part-time cooperative program is a regular member of the Business Education faculty and, as such, is presumed to participate fully in the activities of the total school program.

Adult Extension Program.—Business training for adult workers was provided in 25 different schools in 17 divisions. The program served 2,797 individuals during the 1949-50 session. The adult extension program has been somewhat restricted because of limited funds.

The Principal Accomplishments of Business Education Service for the Year 1949-50

1. Completion and distribution of the Course of Study for Clerical Practice and Vocational Office Training.

. Completion of the Course of Study for Typewriting.

3. Preliminary steps were taken in writing a Course of Study for Shorthand and Transcription.

4. State conferences were held in Roanoke and at Virginia State College for the purpose of improving instruction in basic business education.
5. Employment of a full-time professor for the vocational teacher-training

program at V. P. I.

6. Advisory visits were made to practically all the school divisions in Virginia.
7. The staff of the Business Education Service participated in 22 high school evaluations.

Revision of certification requirements for teachers in Business Education.
 Held workshop at V. P. I. for the Vocational Teacher-Coordinators.
 Held workshop at V. P. I. on curriculum construction in stenography.

10. Held Workshop at V. F. I. on curriculum construction in stenography.11. Participated in pre-school and mid-year planning and evaluation conferences and workshops in several school divisions.

Major Continuing Problems

1. Writing sections of the State courses of study for bookkeeping and basic business subjects. (Parts V and VI.)

2. Securing an adequate supply of competent teachers for the business depart-

ments of the public schools.

3. Extending the advisory service to a greater number of schools and teachers of Virginia as far as possible with the staff available.

4. Improving and extending the Teacher-Training Program at V. P. I. to include facilities for cadet teachers under the direction of a competent

critic teacher.

5. Expanding and improving the Part-Time Cooperative Work Experience Program to include an additional five schools not now being served in this respect.

DISTRIBUTIVE EDUCATION

I. Statement of Purpose of Service

Distributive Education is the term used to describe vocational training designed for persons who are directly engaged in merchandising activities or in direct contact with buyers and sellers when (1) distributing to consumers, retailers, jobbers, wholesalers, and others the products of farm and industry and (2) managing, operating, or conducting a commercial service or personal service business or selling the services of such business. Distributive Education is designed to fit those who want to enter or have entered distribution to become self-supporting, efficient members of their own community by providing specialized training preparatory to entering distributive occupations, and in-service training both for management and for others employed full-time.

Population research in Virginia has shown a marked and rapid shift in the labor force to distributive occupations. As a result more than two out of every five high school graduates enter the field of distribution, our third largest economic activity. The increase in job opportunities in distributive occupations has been more rapid than the growth of training facilities in this field. This has caused thousands of untrained and ill prepared people to enter the field of

distribution.

The major objectives of the Distributive Education Service in Virginia may be briefly stated as follows:

1. To train prospective workers in distributive occupations.

2. To help present and prospective workers to:
a. Find satisfactory employment.

b. Serve consumers to their maximum profit.

c. Increase earning power through the development of greater skill and productivity.

d. Encourage and stimulate the development of small enterprises.

3. To reduce the cost of distribution and increase the quality of service rendered the public through distributive occupations.

II. Scope

GENERAL

The nature of the Distributive Education Service has been such that it could be brought only to those communities in which an appreciable number of persons make their living in distributive occupations. Therefore, the greatest demand for this service has been in urban centers. As this demand is met, however, and facilities for giving service are expanded, Distributive Education will gradually reach into the more rural areas. Already progress in this direction has been made through the employment of a limited number of itinerant instructors. Since 1940, every community in the State with a population of 2,500 or more has been reached by either a full or part-time program of Distributive Education.

As evidence of the recognition merchants are giving the need for information and training in their field, the Distributive Education Service was requested to hold its sixth annual Retail Personnel Conference in conjunction with the Virginia Retail Merchants Association's annual convention. One hundred and sixty-five retailers and Distributive Education teachers from all parts of the

State participated in this two-day conference.

KINDS OF CLASSES OFFERED

Cooperative Part-Time.—These are the classes offered to high school seniors not less than sixteen years of age who must be employed a minimum of fifteen hours a week in a suitable distributive occupation. Usually the student spends the mornings in attending high school classes and the afternoons working in stores. For this work they receive the customary wages of workers with similar training and experience. Thirty-four high schools in twenty-eight communities participated in the cooperative part-time program and had a total enrollment of 871 seniors. In spite of the fact that the installing of the twelfth grade in many of Virginia's high schools resulted in practically no senior class, in many schools this was an increase of 59 students over 1948-49 and was the largest number ever to enroll in the cooperative part-time program.

Consumer Buying.—In many communities the teacher-coordinators teach a consumer buying course to juniors and seniors in the high school. This teaching keeps the two-way process of buying and selling in mind and thus benefits both the retailing and consumer buying classes. The course meeets a definite need in educating high school youth in buying and at the same time serves as an excellent introduction to the retailing course.

Since many students taking the consumer buying course hold part-time jobs

Since many students taking the consumer buying course hold part-time jobs in stores, the Distributive Education Coordinator extends his coordinating activities to these workers as well as to those in his retailing class, thus performing an additional service to the stores, to the students, and to the buying public.

Extension Part-Time and Evening Classes.—These classes are designed to increase the skill, technical knowledge, occupational information, and judgment of out-of-school youths and adults. A sharp decrease was experienced in the number of veterans taking related instruction to their on-the-job training. Because of this expected decline the related instruction to veterans was assimilated into the regular adult or Retail Institute program where feasible. It is significant to note that in spite of the sharp decrease in the number of veterans participating, 9,564 adults took advantage of distributive training, an increased 485 over 1948-49. This increase is in no small way a direct result of emphasizing Virginia's "Long Term Program" as a one-year curriculum in distribution leading to a diploma instead of placing emphasis on short unit courses.

In preparing for emphasizing the Long Term Program as a one-year curriculum, techniques of the community survey were developed to achieve the follow-

ing:

1. Give the coordinator an opportunity to introduce himself and to explain the Distributive Education program.

2. Find out the necessary information for placement of high school students.

- 3. To determine the needs for adult retail training, so the coordinator would know how to organize and promote the Retail Institute adult classes.
- To give the coordinator specific information on business conditions and 4.

Two itinerant instructors on the State staff taught specialized courses in supervision, salesmanship, and tourist information throughout the State as well as made distributive education available to some smaller communities where it would otherwise have been impossible.

During the year, 58 schools in 49 communities participated in distributive training on the adult level and had a combined enrollment of 9,564.

TEACHER TRAINING

Pre-Service Training.—A directed full-time teacher training program is carried out at the School of Distributive Education at the Richmond Professional Institute of the College of William and Mary. This year 29 completed the teacher training program. Class work was correlated with work experience as follows: During the summer, students worked full-time in stores and were required to submit a written report on their work experience. Many worked part-time throughout the year and all undertook directed store observation.

For a six-weeks' period prior to Christmas, students were employed on a full-time basis in stores throughout Virginia. During this time when stores normally do sixty-five per cent of their total volume, these students had the opportunity to assume responsibility in the store's operation in jobs of a super-

visory and non-selling nature.

The students learned the technique of planning and running conferences by taking part in carrying out two major annual events: the State Conference of Distributors' Clubs, and the State Retail Personnel Conference.

In-Service Training.—Area supervisors trained new coordinators on the job and were available for conferences on problems which arose on a local level. Members of the teacher training staff likewise visited local communities for the purpose of giving on-the-job training where needed. Adult instructors received aid from area supervisors, local supervisors, and teacher trainers in presenting their subjects.

SUMMARY CHART

	Communities Served	Schools Participating	Coordinators or Part-Time Instructors	Assistance Received by
1. High School Part-Time Cooperative	28	34	38	871
2. Adult Extension and Part-Time	49	58	126	9,564
3. Teacher Training Institution (RPI)		1	8	63
Summary total 1, 2, and 3	50	59	134	10,489

III. Outstanding Accomplishments

Surveys for determining training needs were made in 36 communities.

Expansion in adult training in areas served as well as numbers trained 2. was experienced as a result of organizing courses into a year's curriculum or Retailing I.

A survey of customer shopping practices in retail furniture and home 3. furnishings was made. This involved a house-to-house canvass of over

500 homes in Richmond.

5.

A small business clinic, organized for the entire year under the plans of the Long Term Program for merchants engaged in small business enterprises, was so successful it was necessary to form two groups. Classes were organized for the first time to train bakery and dairy route

salesmen and taxi cab drivers.

6. The following new course content was developed and distributed to coordinators throughout the State:

Retail Advertising II Consumer Buying Tourist Information

7. Classes in tourist information courses conducted, in cooperation with the various Chambers of Commerce and Retail Merchants Associations, continued to build sound public relations, increase sales volume, and acquaint groups with the entire DE program. During the year this service was made available to 707 adults.

IV. Problems

- 1. The existence of many small centers where distributive occupations are not available for placement of students as well as training on the adult level those already engaged in distributive occupations.
- 2. Where the twelfth year has been added to the high school program, there is one year when the senior class is made up of a few retarded students and transfers. This affects enrollment as Distributive Education is offered only to seniors.
- 3. Many schools, especially small schools, experience difficulty in adjusting schedules to permit Distributive Education students to leave at the proper time for job training.
- 4. Transportation of Distributive Education students in rural schools to communities where distributive occupations are available presents a difficulty in some areas.
- 5. To develop an understanding on the part of school administrators that adult distributive training is a vital and necessary adjunct to a successful high school program, is a basic principle not yet accepted by all administrators. Approximately one-half of the coordinators' time is needed for this training to increase the efficiency of those already in distribution as well as develop better supervision for the high school student working in store jobs.
- 6. Unstable economic conditions reflect a continual change in availability and cost of consumer goods and services. Distribution as a field is the first to feel the effects of any change in production or the cost of production. A quick shift in the training curriculum on high school and adult levels is necessary in case of economic necessity.

HOME ECONOMICS

I. Vocational Homemaking Program

A. Purpose

The general goal of education for homemaking is to help individuals to value homemaking as a career and to become good homemakers in their communities. It includes training planned to enable them to apply modern concepts of science, social relations, art and economics to the problems of homemaking. Through guided experiences in the home, school and community, pupils acquire understandings, attitudes and skills which enable them to contribute to the building of wholesome and happy family life in their own homes and those of others in the community.

B. Scope

A total of 80,357 individuals was reached in 1949-50 through various phases of the vocational homemaking program.

1. In-School Program

Homemaking instruction was offered in 439 schools, including vocational and non-vocational classes, in 95 counties and 23 cities, by 531 home economics teachers. Out of a total of 61,944 girls enrolled in secondary schools in which vocational homemaking was offered, 27,834 were currently enrolled in homemaking classes, 9,671 had been enrolled previously for one or more years and 6,385 were enrolled in the short period (9-18 weeks) exploratory homemaking course in the eighth grade. Thus it is shown that 71 per cent of all girls attending high schools offering vocational homemaking were being reached or had been reached by the program in 1949-50.

Homemaking education for boys was provided in a number of secondary schools. In these schools, 2,003 boys were enrolled in separate classes, general classes for boys and girls, or in exchange classes with agriculture, indus-

trial arts, and distributive education.

The Virginia Associations of the Future Homemakers of America and New Homemakers of America, organizations of high school pupils enrolled in homemaking classes, included 368 chapters, with a total membership of 12,585 girls.

The following services were rendered by high school homemaking teachers

in the elementary schools:

As a part of the regular program of the elementary school, 40 home-making teachers worked with elementary teachers in providing home-making experiences for 1,123 elementary pupils.

In 31 schools, 522 elementary pupils were enrolled as over-age pupils in regular homemaking classes, or were reached through joint work

with sisters enrolled in vocational homemaking classes.

2. Out-of-School Program

A total of 42.562 adults was reached in the following ways:

In organized classes in homemaking, 6,418 women and 501 men were

enrolled.

Through a program of food production and conservation, 32,033 men and women were enrolled in organized group work. This phase of the program was conducted jointly by vocational home economics and agriculture.

In 230 schools, 3,610 adults came to homemaking departments for work on individual problems, or were helped through visitation to homes

by homemaking teachers.

3. Pre-Service Training of Teachers of Vocational Homemaking

In the four colleges approved for training vocational homemaking teachers, 186 junior and senior students were enrolled as majors in home economics education. Graduates of these institutions in home economics education in 1950 numbered 86.

*This phase of the program is conducted jointly by Home Economies and Agriculture. The enrollment figure of 32,033 is included also by Agriculture.

C. Accomplishments

Aid has been given school divisions in securing teachers qualified to develop a vocational homemaking program through making available to them current information on available teachers. A study was made of the certification status of homemaking teachers, and aid was given teachers not fully qualified in determining vocational offerings that would meet their needs for securing a Collegiate

Professional Certificate endorsed for teaching vocational homemaking.

Assistance has been given in conducting 189 small group meetings of home economics teachers in 95 school divisions for the purpose of developing different aspects of the homemaking program; such as, studying pupil needs and making plans for meeting these needs through exploratory, vocational homemaking,

and adult classes.

Individual visits were made by supervisors to 95 per cent of the schools in the State offering vocational homemaking. The purposes of these visits were to help teachers with individual problems of instruction, to consult with principals and superintendents in regard to the number of pupils reached, the content of the courses offered, teaching procedures used, materials of instruction available, and space and facilities provided.

A State-wide conference for white vocational homemaking teachers, held at Madison College, August 13-17, 1949, provided opportunities for discussion of problems in developing local programs, selecting emphases in programs, selecting materials of instruction, and developing improved teaching techniques. Similar opportunities were provided Negro home economics teachers through a State-

wide conference at Virginia State College.

The activities of the Future Homemakers of America and the New Homemakers of America organizations were guided by the supervisors of the Service. Two State-wide conventions were held, during which delegates from local chapters and local and State supervisors engaged in activities pertaining to ways of strengthening local chapter programs. As a part of an effort to provide opportunities in leadership training, supervisors in the Service were responsible for arranging for and guiding 70 delegates and advisers in attendance at national meetings of the two organizations.

The Service has shared with the Vocational Agriculture Service the function of guiding the development of the FFA-FHA Camp located at Morgart's Beach and the NFA-NHA Camp located in Chesterfield County. There were 894 youths

in attendance at these camps during the summer of 1950.

II. School Lunch Program

A. Purpose

The school lunch functions as an integral part of the schools' program. It is designed to provide food service and educational experiences in nutrition, health and citizenship and to supplement the efforts being made in homes to check nutritional deficiences which are found to exist among a large number of pupils.

B. Scope

During the school session, 1949-50, lunches were provided in 1,273 schools in the State to an average of 263,970 pupils daily. Of this number of schools, in the State to an average of 205,970 pupils daily. Of this lumber of schools, 1,144, an increase of 66 over the previous year, participated in the National School Lunch Program receiving \$1,611,167.00 in food reimbursement for 33,159,286 lunches served to a daily average of 171,855 pupils. The peak average participation of 182,960 pupils served daily occurred during the month of January.

In addition to the Federal and local funds used to supply food for school lunches, direct distribution commodities provided by the United States Department of Agriculture and distributed by the Virginia Division of Markets amounted to \$1,977,912.20. This food was used by 1,887 schools, serving 274,454 pupils.

Four counties and nine classes employed local school lunch supervisors. This

was an increase of one local supervisor over the number employed the preceding year.

*National School Lunch Act, Public Law 396, 79th Congress, 1946.

C. Accomplishments

Assistance was given in conducting 72 county-wide small group conferences for school lunch personnel, to aid the superintendent of schools, principals, and

managers of lunch rooms with program operation and development.

Approximately 40 per cent of the total number of school lunch programs participating in the use of National School Lunch Program funds were evaluated by making administrative reviews of the program, and a follow-up of conditions which needed correction was made by letter or visit by a representative of the

There were 21 Federal audits made of individual schools participating in the National School Lunch Program. A study of these audits was made and a report of the findings submitted to each superintendent and supervisor. A followup visit was made by a representative of the State office if further assistance was

needed. District supervisors participated with local school administrators and Federal auditors in reviewing the findings of the audits.

Two State conferences of school lunch workers were held in 1949-50, one at Madison College, Harrisonburg, Va., for white personnel, and the other at Virginia State College, Petersburg, Va., for Negro personnel. The purposes of the conferences were to acquaint the school lunch workers with the educational and nutritional aspects of the program; effective management techniques, sanitation standards and laws; value and storage of U. S. D. A. and other commodities; menu planning; quantity food preparation, and record keeping.

The supervisors assisted the vocational homemaking teachers in 224 schools, and other classroom teachers in many schools, in giving assistance to school lunch programs through all or some of the following ways: supervising the preparation of lunches, planning menus, holding classes for giving on-the-job training to school lunch personnel, and assisting in the improvement of equipment and

facilities.

The development of the educational opportunities of the school lunch room has been a joint contribution of supervisors, principals, teachers, interested agencies, and civic groups in aiding pupils in securing basic information about nutrition, in cooperating in the improvement of lunch rooms, in acquiring better eating habits, improved social behavior, and good citizenship practices.

The Service prepared and transmitted to superintendents of local school

divisions materials dealing with administrative phases of the program.

III. Cooperative Work With Colleges

The statement of emphases selected by vocational homemaking teachers at their annual State teachers' conference for the home economics education program in secondary schools, 1949-50, was shared with members of home economics faculties in colleges approved for training home economics teachers for the purpose of enabling them to modify college offerings in light of program needs as recognized by the teachers.

Representatives of the Home Economics Education Service with representatives of the colleges, in consultation with Miss Beulah I. Coon, of the U.S. Office of Education, held several meetings for the purpose of discussing goals

for teacher education.

Colleges were visited by supervisors in the Service to interview seniors who were home economics education majors. Visits to colleges were made by the State and district supervisors to discuss with heads of departments, faculty and students various aspects of instruction in vocational homemaking and school

lunch program operations.

The Service cooperated with the Division of Vocational Education of Virginia Polytechnic Institute through a graduate committee in the development of a graduate program of home economics education. During 1949-50, supervisors of the Service assisted in the organization of groups for off campus courses offered by Virginia Polytechnic Institute in homemaking education on the graduate level. There were 53 home economics teachers enrolled in classes in the State. Supervisors assisted teachers to determine their need for graduate work and how these needs might be met through attendance in graduate schools in this and other states.

The Service likewise cooperated with the colleges in planning training programs for school lunch supervisors and managers. This year, work was centered in courses in school lunch management offered as a part of the graduate program leading to a Master's Degree with a major in foods and nutrition, and as a part of the undergraduate training of home economics teachers and institutional management majors.

IV. Major Problems Faced by the Service

Rapid expansion in both the homemaking education and the school lunch programs has made it increasingly difficult for the present supervisory staff of the Service to continue to supply the resource aids which have been provided school divisions in past years and to meet requests for new aids.

Difficulty is experienced in helping superintendents to locate a sufficient number of fully qualified white teachers for vocational homemaking departments. Aiding school divisions in securing adequately trained school lunch managers

and supervisors is likewise a problem.

Coordinating the pre-service and in-service training of home economics teachers continues to be difficult. There are six colleges approved by the State Board of Education for training home economics teachers. Arranging for the supervisors of teacher education in these six colleges to work sufficiently with the field supervisory staff constitutes one of our major problems.

REHABILITATION

General Statement.—Vocational Rehabilitation is a service the purpose of which is to prepare for and adjust in appropriate trades or occupations persons of work age whose vocational possibilities are limited by reason of serious impair-

ment or disability.

Rehabilitation is an individual process and can only be accomplished by individual casework procedure. Its services are lasting ones and when completed are generally not necessary again. Through vocational diagnosis, counseling, physical restoration, vocational training, and placement an applicant is helped to achieve a status of self-support, thus relieving family or community of the burden of support to a dependent person. The aid of many agencies, organizations and individuals in each community is invaluable in locating those in need of service and in carrying out rehabilitation programs for those thus referred.

The Service has two principal units, the Field Counseling Service and the

Woodrow Wilson Rehabilitation Center.

Field Counseling Service.—During the year rehabilitation services were provided by twenty-one field supervisors (counselors) working out of ten offices situated for convenience and economy in the several sections of the State. The field staff handled a total case load of 9,836, 5,018 being carried over from previous year, and 4,818 being new referrals. 7,927 of these were reached for service or study. Due to limitations of staff, 1,909 applicants could not be reached.

Status of Enrollment.—The total active roll for the year was 9,836 cases, an increase of 17 per cent over the previous year. 5,577 of these required attention with the following results: Completed rehabilitations, 1,289; in process of rehabilitation, but not completed, 1,789; closed without service after study, 725; undergoing plan development, 1,774. Of the total of 6,813 applications processed, 2,554 were accepted for service, 2,350 were rejected, and 1,909 were carried over as referrals awaiting investigation.

The Investment.—To support the program the Vocational Rehabilitation Service spent \$604,083.85. Of this amount \$380,578.07 came from Federal Rehabilitation funds; State and local funds amounted to \$223,505.78. Of the total amount spent, \$36,638.68 was used for capital improvements and deferred maintenance at the Woodrow Wilson Rehabilitation Center.

In return for this investment, 2,755 disabled Virginia men and women were actively engaged in rehabilitation programs. Of these, 1,289 completed their preparation during the year and went to work at wages aggregating \$1,748,700.00

for their first year of work following rehabilitation. In addition to making their own support, these 1,289 disabled citizens are supporting 2,187 dependent members

of their families.

The wages reported above do not include the earnings of 229 rehabilitated individuals who were reported to be farmers and housewives. They work in their own homes and on their own farms. The contribution of these persons to the care and support of their families is substantial, although not easily reducible to a monetary value.

The Group Rehabilitated This Year.—A study of the 1,289 cases whose rehabilitation was accomplished during the year reveals the following facts:

> Age: Under 21, 231; 21 to 23, 91; 24 to 29, 184; 30 to 35, 194; 36 to 41, 202; 42 to 47, 133; 48 to 59, 202; 60 and over, 52.

Sex: Male, 726; female, 563.

Origin of disability: Employment accidents, 141; other accidents, 272; disease, 741; congenital, 133; military and naval service, 2.

Nature of disability: Hand or hands, arm or arms amoutated or disabled, 111; foot or feet, leg or legs amputated or disabled, 346; back disabled, 87; seriously defective vision, 45; arrested tuberculosis and other lung conditions, 82; impaired heart, 30; hernia, 123; defective hearing, 116; mental, 17; serious speech impairments, 17; epilepsy, 13; pelvic disorders, 195; miscellaneous disabilities, 107.

Schooling: None, 83; grades 1 to 3, 108; grades 4 to 6, 320; grades 7 to 9, 372; grades 10 to 12, 349; grades 13 to 14, 38; grades 15 to 16, 19.

Woodrow Wilson Rehabilitation Center.—In July, 1947, the State acquired approximately one-third of the former Woodrow Wilson Army General Hospital, located at Fishersville, Virginia, for the establishment of a rehabilitation center. Progress continued during the year in converting fifty-seven buildings acquired to student dormitories, classrooms, workshops, and housing for administrative and other service functions. The enrollment increased from 141 to 210 students during the year. Three hundred and twenty-four students were received during the year. From November 3, 1947, the date on which the first student was enrolled, a total of 642 persons was enrolled for some service. It is expected that a capacity enrollment of 350 students will be reached by January 1, 1951.

The Center is designed to render service to rehabilitable disabled individuals as follows: (1) Vocational guidance, including complete testing, vocational exploratory courses and vocational tryout opportunities, (2) Vocational training in trades and occupations not elsewhere available in the State and under conditions particularly favorable to handicapped persons, and (3) Physical reconditioning and functional training of handicapped persons to reduce or remove through

modern physical medicine procedures work handicaps.

It is pointed out that this facility is not a hospital, but a vocational preparation Center. It is operated as a part of the Vocational Rehabilitation Service and its students are admitted after being processed in the usual manner by the field staff of this agency.

Summary.—The following summary is submitted in support of the economic value of rehabilitation. No scale has been devised for measuring the happiness and satisfaction experienced by these physically disabled people in attaining a status of self-support, nor it is possible to estimate their communities' profit in better citizenship.

TABLE 21—REHABILITATIONS, THEIR COSTS AND THEIR EARNINGS FOR THE TWENTY-TWO-YEAR PERIOD SINCE 1928, WHEN THE EDUCATION DEPARTMENT WAS ASSIGNED THE SERVICE

^{*}Does not include costs in establishing Woodrow Wilson Rehabilitation Center.

TRADE AND INDUSTRIAL AND INDUSTRIAL ARTS

The Trade and Industrial Education Service is concerned with the vocational preparation of persons who are employed in the mechanical trades and public service occupations, with the training of instructors for trade and industrial pursuits, with the general education in the mechanical fields of high school and junior high school students, and, under prescribed conditions, with the vocational education of persons employed in commercial and clerical vocations. The Service cooperates with local school boards in organizing classes, making surveys, promoting the development of vocational education, and in paying the salaries of instructors of approved vocational and industrial arts classes.

In order to meet the specific needs of different classes of workers or prospective workers, provisions are made for the organization of classes which will be of greatest value to the persons for whom they are organized to serve, and are as

follows:

- Day Trade Classes are organized for boys or girls who have decided to follow a given trade or industrial pursuit. These classes meet during the daytime and emphasis is placed upon the acquisition of trade skills and related trade information, though from one-fourth to one-half of the day may be devoted to the pursuit of non-related academic subjects;
- 2. Evening Vocational Classes are organized to increase the skill and/or related technical knowledge of persons who are employed during the day in any trade or industrial pursuit. The instruction in the evening classes must be supplemental to the kinds of work the persons are doing during the daytime;
- 3. General Continuation Part-Time Classes are organized for the benefit of workers in stores, hospitals, offices, industries, etc., who wish either to increase their skill and knowledge of the vocation which they are following or to complete a general elementary or high school academic course. Anything may be taught in these classes which will increase the

general or vocational knowledge of the workers. These classes are held during the daytime;

- Trade Extension Classes are those classes in which instruction is given to employed workers for the purpose of increasing or extending their skill and knowledge in the trade or occupation in which they are or have been engaged. Classes offering related instruction for apprentices, for workers in skilled and semi-skilled and other occupations, and for employed public service workers, and classes providing instruction designed to increase or extend the knowledge or skills of workers in trade and industrial pursuits or occupations, are trade extension;
- Trade Preparatory Part-Time Classes are classes in which instruction is given to workers who have left the full-time schools for the purpose of fitting themselves for useful employment in trades, occupations, or fields of industry, other than those in which they are or have been employed. These classes prepare a person to change from one type of employment to another type;
- Foremen and other minor executives may attend foreman training classes, 6. the objective of which is to increase their supervisory, teaching and managerial abilities:
- In order to secure properly qualified instructors for these several types 7. of classes, provisions are made for organizing instructor training classes;
- General Shops are organized in junior and senior high schools. While 8. the objectives of these shops are not to give specific vocational information, yet some students acquire considerable vocational information and skills. The specific objective of these general shops is to give boys an opportunity to give expression to any mechanical or scientific aptitudes that they may possess, to serve as a means of holding children in school, and to give them a limited amount of vocational guidance;
- Specific courses are organized for public service employees, including firemen, policemen, finance officers, public utility operators, sealers of weights and measures, public welfare and social workers, persons in charge of correctional and eleemosynary institutions, and other employees of the State and political subdivisions thereof.

During the past year, 10,344 working people in Virginia, representing fortyfour different vocations, received instruction in vocational skills and related technical information. In addition 27,421 high school students received instruction in general shop and trade and industrial vocational classes that were partially financed with State funds.

In the part-time classes, operated during the year, instruction designed to increase the skill and technical knowledge, hence the efficiency, was given to school custodians or janitors, school bus drivers, volunteer firemen, peace officers, sealers of weights and measures, finance officers, personnel of the Rural Electrification Administration, nurses, coal miners, cotton mill employees, and workers in practically all of the machine and construction industries, including workers apprenticed under the State Apprenticeship Law.

A few programs of trade and industrial education of more recent development

include the following:

Technical Schools. These schools, at present, offer pre-employment 1. training in many of the trades and in office occupations. Their purpose is to make this training available to those whose home schools cannot justify such offerings. Operating boards collect tuition to cover local share of costs for which such boards are not obligated. They are of the following types:

Regional Technical Schools with dormitory facilities owned and operated by local school boards but enrolling students from all parts operated by local school locards but enrolling students from all parts of the State. Offerings in highly specialized trade and technical fields are divided among these schools to avoid duplication. The following schools are in this group: Danville Technical School, Danville; Woodrow Wilson Technical School, Fishersville; and Manassas Technical School, Manassas.

- b. Area Technical Schools offer pre-employment training in many of the trades and in office occupations to persons within daily commuting distance. Such schools are: Wise County Technical School, Wise; Washington County Technical School, Abingdon. The vocational departments of high schools in the larger cities accept students in their vicinity.
- c. Regional High Schools with dormitory facilities and vocational departments are: Manassas Regional High School, Manassas, and Christiansburg Industrial Institute, Christiansburg.
- d. College departments with vocational offerings below college grade are: Virginia State College, Petersburg and Norfolk; The Technical Institute of the College of William and Mary and V. P. I., Norfolk; St. Paul's Polytechnic Institute, Lawrenceville (facilities made available through Brunswick County School Board).
- 2. Programs for the training of practical nurses are being operated on an all day trade basis at Norfolk City, Prince William County, Richmond, Tazewell, and on an evening extension basis at Alexandria, Danville, Newport News, Norfolk, and Richmond.
- 3. The State Apprenticeship Law requires State and local boards responsible for vocational education to provide related training for all apprentices. This is being accomplished in the regular trade extension courses and in classes set up in cooperation with the Veterans Administration.
- 4. New programs conducted during the year:
 - a. Short Courses on a State-Wide Basis:
 - (1) At Crewe, Virginia, a thirty-two-hour course was conducted for foremen, linemen, helpers, metermen and technicians employed by the several R. E. A. Cooperatives. Several manufacturers and distributors provided equipment and assisted with the instruction. One hundred twenty men attended the course.
 - (2) At the State Police Headquarters in Chesterfield County, a two-weeks course was conducted for Peace Officers recruited by the several counties and cities. Personnel of the Richmond Police Department, the Federal Bureau of Investigation, United States Secret Service, the Virginia Penitentiary, University of Richmond, the Virginia State Toxicology Service, the Arson Section of the State Corporation Commission, and the Virginia Courts assisted with the instruction. Sixty-five men attended the course.
 - (3) At Roanoke, Virginia, one hundred and thirty firemen from the State attended a State Fireman's School which was in session for forty hours. Personnel from the State Fire Chiefs Association, the State Firemans Association and the League of Virginia Municipalities assisted with the instruction.
 - (4) Regional Schools for the training of school custodians and maintenance men, lasting for twenty hours each, were conducted at Newport News, Richmond, Norfolk, Wytheville, and Lynchburg (2). Personnel from manufacturers and distributors of heating equipment, plumbing fixtures, various kinds of flooring materials, and materials for the care and maintenance of floors assisted with the instruction. A total of 698 custodians completed the courses while many others, including principals, superintendents, and interested citizens and town officials, attended the courses for varying lengths of time.
 - (5) State-Wide Meetings of the Diversified Occupations Clubs were held at Brookville High School and at Phoenix High School, Hampton. Ninety-two persons, including 73 student delegates

attended the Brookville Meeting and 68 persons, including 57 student delegates attended the Hampton Meeting.

Two State-Wide Conferences and Work Shops for the Coordinators of the Diversified Occupations Program were held in (6) Richmond at the Richmond Professional Institute, one in August 1949 and one in June 1950. Thirty-three persons attended each of these conferences.

The City and Town Managers gathered at Natural Bridge for a two-day institute in April which was attended by 107 (7) persons, including a few from surrounding states. Attention was directed to the current problems of municipal management

through the conference method.

A three-day course for Water and Sewaage Works Operators (8)throughout the State was held at the Virginia Polytechnic Institute in Blacksburg, in June, with a total attendance of 135. While this school was planned largely by the State Department of Health and the State Water Control Board, the Assistant State Supervisor of Trade and Industrial Education, in Charge of Public Service Training, assisted in planning the school and in its operation.

A two-day institute for fire chiefs from all sections of Virginia (9) was held at Farmville, August 15th and 16th. The total attend-

ance was 67.

A two-day institute for police chiefs and town sergeants was (10)held at Roanoke, October 13th and 14th, with a total attendance

A two-day institute for building, plumbing and electrical inspectors was held at Roanoke, October 10th and 11th, with (11)a total attendance of 31. Programs for this institute, as well as the other institutes enumerated above, were carefully planned and were carried out with both lectures and conferences.

b. Expansion of the Regular Trade and Industrial Program:

During the year new programs in Diversified Occupations were in operation at Bassett, Hampton, Newport News, and Vinton. New industrial arts programs were in operation in Augusta County, Henry County, Fairfax County, Martinsville, Norfolk, Orange, Pittsylvania County, Princess Anne County, and Warwick County. A technical institute program for high school graduates was in operation in the Virginia Mechanics Institute in Richmond, and a similar technical course for the training of engineering and architectural draftsmen was in operation in the Richmond Professional Institute.

Instructor Training and Coordinator Training:

A three-week program for the training of coordinators was established at the Virginia State College.

Teacher training courses were conducted at Petersburg, Norfolk County, Norfolk City, Wise County, and Augusta County.

- Eight Industrial Education Teachers Clubs were in operation during c. the year. The Blue Ridge Club met at Danville, Lynchburg, and Roanoke; the Central Virginia Club met at Fishersville, Charlottesville, and Waynesboro; the Southside Club met at Petersburg and Hopewell; the Peninsula Club met at Newport News and Hampton; The Tidewater Club met at Norfolk and Norfolk County; the Northern Virginia Club met at Fairfax, Prince William County, and Alexandria; The Richmond Area Club met at Fredericksburg and Richmond; and the South Western Virginia Club met at Abingdon.
- The Trade and Industrial Service is held responsible for organizing, supervising, related and supplementary instruction for veterans who

are in on-the-job training in trade and industrial pursuits (and in correlating this instruction with job experiences). During the year, 3,672 such veterans were in classes taught in 93 schools operated by the local school divisions. Fourteen part-time supervisors employed by the veterans training service and two full-time men employed by the trade and industrial service, together with the local directors of vocational education and the 163 instructors of classes did a very satisfactory job in correlating the classroom instruction with job experiences.

TABLE 22—STATE COVERAGE IN TRADE AND INDUSTRIAL EDUCATION

	Counties	Classes	ment
Day Trade Classes. Industrial Arts Classes. Trade Extension Classes. Part-Time Cooperative. Teacher Training. Veterans Training.	98 12 1	97 112 463 13 12 90	2,133 8,815 5,899 289 30 2,003

The further development of the program of Trade and Industrial Education calls for the following:

- Assisting local communities to build adequate buildings to house technical institutes and area trade schools.
- Improving the quality of instruction in technical institutes so that the graduates of such schools will be qualified to accept technical jobs in industry and business.
- 3. Expanding the technical instruction of girls and women especially in the field of practical nursing.
- 4. Providing trade extension instruction for employed workers, especially apprentices.
- 5. Employment of an additional Assistant State Supervisor to take charge of the Apprentice Program.

The demand for vocational education during the past ten years has followed four distinct trends. The first trend is for day trade classes in which high school boys and girls can prepare themselves for some specific trade or industrial pursuit. The second trend is for general shop instruction in which high school and junior high school students can acquaint themselves with industrial processes and give expression to their mechanical and scientific aptitudes and to learn about the properties and uses of materials of industry. The third trend is for part-time cooperative education in which high school boys and girls spend half of each day in school and the other half working at some vocation of their choice. The fourth trend is for trade extension (evening) classes to provide related and supplementary training for employed persons and apprentices.

DEVELOPMENT OF PROGRAM

The following table shows the type of classes that have been operated and the enrollment in each by years.

TABLE 23—SUMMARY OF WORK IN TRADE AND INDUSTRIAL EDUCATION 1918-1950

VETERANS' EDUCATION

The State Department of Education has been designated as the Approval Agency for institutional, on-the-job, and apprentice training of veterans of World War II under the provisions of Public Law 346, 78th Congress, as amended. The Committee on Veterans' Education of the State Department of Education has established policies to be followed by the Executive Officer of the Committee in carrying out the provisions of the Law in accordance with fundamental principles of education.

During the year 1949-50 the Executive Officer of the Committee, with one Assistant and fourteen District Supervisors, worked under the direct supervision of the Director of Vocational Education. By contract with the Veterans Administration, the State was reimbursed in full for salaries and travel of the Assistant to the Executive Officer, the fourteen District Supervisors and five clerical workers.

On-The-Job Training.—During the year the Committee received 1,359 applications for approval for on-the-job training for establishments in the State which were processed as follows:

Approvals	836 483
Not processed by July 1, 1950	40
	1,359

The following changes were made during the year in the number of establishments approved for training:

Number establishments approved as of July 1, 1949	6,357
Number establishments approved during year	836
Number establishments withdrawn from approval during	
year	4,283
Total number establishments approved as of June 30,	
1950	2,910

All establishments approved provided a schedule of training showing items of in-service training with hours given to each, supplementary training within the establishment, wage schedule, and at least 144 hours per year of Related Training to be taken at night in an approved institution, usually the public schools. The Veterans Administration contracted with the State Department of Education to pay for this Related Training in the public schools. The District Supervisors of On-The-Job Training served as part-time coordinators of the training in the firm with the Related Training.

During the fiscal year, the District Supervisors made 14,041 supervisory visits to firms approved to provide on-the-job training to veterans.

Apprentice Training.—The Apprenticeship Council of the State Department of Labor and Industry cooperates with the Committee on Veterans' Education by investigating the facilities of establishments desiring to give training in apprenticeable classifications and by recommending approval to the Committee on Veterans' Education. The District Supervisors served as part-time coordinators of the apprentice training in the establishment with the required Related Training taken in the public schools, visiting 3,401 firms approved for apprentice training.

Institutional Training.—The following types of institutions are approved for veteran training:

- Virginia Institutions of Higher Education accredited by the State (1)Board of Education
- Elementary and secondary State schools accredited by the State Board (2)of Education
- Vocational schools accredited by the State Board of Education (3)
- Hospitals approved by the Council on Medical Education and Hospitals (4)of the American Medical Association
- Flight Schools approved by the Civil Aeronautics Administration. (5)

If a private vocational school desires approval, it must meet requirements for approval established by the Vocational Division of the State Department of Education and must have had at least twelve months' successful operation as a school within the State before approval can be given for veteran training.

WORLD WAR ORPHAN EDUCATION

Since 1930, the General Assembly has appropriated a sum each year for the

education of World War Orphans.

To be eligible for assistance from this fund, a boy or girl must be between the ages of 16 and 22, and the father must have been killed in action or have died from other cause in the World Wars from April 6, 1917 to July 2, 1921, or from December 7, 1941, to the date of cessation of hostilities as fixed by the United States Government, while serving in the Army, Navy, or Marine Corps of the United States. Recent amendments to the law provide for the inclusion of such children whose fathers were, or are, or may hereafter become totally and permanently disabled due to service during the said World Wars, whether the veteran be living or dead. The effect of amendments in 1942 was to extend free tuition in State institutions to eligible persons up to 25 years of age. The maximum benefit is fixed by law at \$400 for any one student during any one year.

As shown in the following table, expenditures for "matriculation fees, board and room rent, books and supplies", items permitted under the law, amounted to \$8,874.32 for eligible cases receiving benefits from the fund during the year:

TEACHER EDUCATION AND CERTIFICATION

The Office of Teacher Education is responsible for (a) preparing and revising certification regulations, for (b) issuing and renewing teachers' certificates, (c) issuing qualifying certificates to those who are licensed to practice medicine and dentistry in Virginia, (d) conducting the teachers' scholarship program, and (e) The Coordinator of Teacher Education serves as liaison officer between the State Board of Education and the colleges.

Teacher Shortage.—The reduction in the number of holders of Local Permits and of Emergency Teachers' Licenses has continued, but it has been discouragingly small. As shown in the table below by two-year periods, there has been a slow decrease from the peak of 3,220 in 1947-48. The decrease in Local Permits during the past year has been 263, and the Emergency Teachers' Licenses have increased by 38. The net decrease of uncertified teachers during the past year is 225.

As stated in previous reports, a very large proportion of the uncertificated

teachers were used in the elementary schools for white children.

	1939-40	1941-42	1943-44	1945-46	1947-48	1949-50
Teachers employed	17,734	18,076	18,236	19,119	19,967	21,481
Local permits Emergency teachers' licenses		41	1,714	2,313 602	2,105 1,115	1,689 1,191
Total uncertificated	2	41	1,714	2,915	3,220	2,880

The number of students in Virginia colleges who are preparing to teach in elementary schools continues to be very very small in proportion to the need. In the Superintendent's Report for 1948-49 (page 181) a study of the supply and need is reported which gives a fairly accurate picture of the present situation.

Teachers' Salaries.—The averages of teachers' salaries in Virginia, excluding supervisors, principals, and head teachers, for the year 1949-50 as compared with 1948-49 and 1947-48 are shown below:

	WE	IITE	NE	Total	
	Male	Female	Male	Female	
1947-48 1948-49 1949-50	\$ 2,515 2,613 2,719	\$ 1,927 2,081 2,160	\$ 2,300 2,434 2,520	\$ 1,962 2,124 2,209	\$ 1,994 2,146 2,236

This shows continued progress in the equalization of the salaries of white

and Negro teachers, and a very small increase for all.

The fact that 2,880 of the 21,481 teachers in 1949-50 were paid as holders of Local Permits and Emergency Teachers' Licenses tends to reduce these averages. An average of the salaries of certificated teachers would be slightly higher.

Scholarships.—At the 1950 Session of the General Assembly a total of \$275,000 was made available for scholarships during the year 1950-51, and \$305,000 for the year 1951-52. During the 1949-50 Session, 592 scholarships were granted to students in the colleges who were preparing to teach. Most of these were for \$300, a few for \$150. In the summer of 1949, 600 teachers were given summer school scholarships varying from \$60 to \$90. The scholarships as noted in the Superintendent's Report for 1948-49 have helped to encourage students to select teaching as their profession and have helped many teachers to qualify for higher certificates.

Certificates and Degrees.—The rapid turnover in teachers is reflected by the large increase in certificates and licenses issued. In 1939-40, with a total of 17,734 teachers, the number of new certificates and licenses issued was 2,618 and the number of certificates renewed and extended was 2,308. In 1949-50, with a total of 21,481 teachers, 6,555 new certificates and licenses were issued and 3,979 certificates and/or licenses were renewed or extended. With an increase of only 21.1 per cent in the total number of teachers in ten years, there has been an increase in new certificates and licenses issued of 150 per cent, and in renewing and extending certificates of 72 per cent.

The number of teachers holding a baccalaureate or higher degree is shown in Table 25. This indicates that 61.2 per cent held such degrees in 1949-50 as compared with 57.5 per cent in 1948-49. Of the 5,063 Negro teachers, 71.3 per cent held baccalaureate or higher degrees, and of the 16,418 white teachers 58.1

per cent held such degrees.

^{*}An Emergency Teacher's License is issued for one year in the name of an applicant who cannot qualify for a regular certificate but who has two or more years of college work. It is issued only on the application of a division superintendent of schools.
†A Local Permit is an authorization to a division superintendent of schools to use a specific person without a Virginia certificate in a specific position. The Emergency Teacher's License and the Local Permit are not certificates.

*An Emergency Teacher's License is issued for one year in the name of an applicant who cannot qualify for a regular certificate but who has two or more years of college work. It is issued only on the application of a division superintendent of schools.

A Local Permit is an authorization to a division superintendent of schools to use a specific person without a Virginia certificate in a specific position.

The Emergency Teacher's License and the Local Permit are not certificates.

DIVISION OF RESEARCH AND PLANNING

The Division of Research and Planning comprises Research, School Buildings, Pupil Transportation, Statistics, and School Building Surveys. During the fiscal year beginning July 1, 1949, the Division has undertaken through testing, study, and visitation:

 To discover practices and procedures which may be used in the improvement of instruction.

2. To assist localities in planning school buildings which will house adequate

curricula.

3. To aid localities in developing safe, adequate, efficient, and economical pupil transportation systems.

To share with localities in planning immediate and long-range school

building programs.

During the year, ten regular and one supplementary school building surveys were completed. Division superintendents, college professors, and members of the State Department of Education served on the committees which made the surveys. It is intended that the survey reports shall be helpful to division superintendents, school boards, and other local groups and persons in planning over-all school building programs.

The reports on Research, School Buildings, and Pupil Transportation follow in the order mentioned. The statistical data appear in appropriate tables in the

latter portion of the report.

RESEARCH

Purpose

The Research Service is organized to provide the following types of services: (1) the development and administration of State-wide testing programs and the provision of assistance with the development of comprehensive local testing programs; (2) the promotion of Conservation or Resource-Use Education; (3) the preparation of selected or assigned studies; and (4) the provision of assistance with the development of school building surveys.

Scope

The testing program is organized so that assistance may be provided on a State-wide basis with the use of tests to improve instruction. The Iowa Silent Reading Test, Elementary Test was administered during the fall and spring to all eighth grade pupils and the American Council on Education Psychological Examination for College Freshmen, 1947 Edition was administered during the winter to all high school seniors in Virginia's public schools. These two tests involved approximately forty thousand eighth grade pupils and twenty thousand high school seniors. Through the local testing programs sponsored by the Research Service approximately forty thousand additional pupils in twenty-two school divisions were involved.

Conservation Education publications prepared by the Research Service have been sent to division superintendents in sufficient quantity so that they may be deposited in every school library in the State. The Conservation Education work of the Research Service involves approximately nine hundred Virginia Academy of Science members and perhaps an equal number of laymen in garden

clubs and other voluntary organizations.

The study of the academic success of Virginia's 1948-1949 college freshmen during the 1949-1950 school session has involved the work of approximately six thousand college students and twenty-five colleges in Virginia. A large number of questionnaires dealing with a variety of topics has been answered. Many studies involving short periods of work have been completed and the Supervisor of Research has advised with a number of graduate students concerning their research problems.

As the chairman of three school building survey committees, the Supervisor of Research wrote the reports and assisted with school building surveys in nine

other counties and cities.

Major Accomplishments

1. On the basis of improvements in reading test scores between the fall and spring it appears that many school divisions have used analyses of test results as an effective tool in the improvement of instruction in reading.

2. Reports from school divisions cooperating with the Research Service in the development of comprehensive local testing programs indicated that an increasing number of administrators and teachers are making more effective use of tests in the improvement of instruction.

3. An awareness, on the part of educators and laymen, of the importance of Conservation Education seems to be developing steadily.

4. It appears that an increasing proportion of our population is coming to accept research and its methods of study as an effective tool in education as well as in other fields.

SCHOOL BUILDINGS

The School Buildings Service attempts to coordinate the aims, activities, efforts, and objectives of many individuals and groups; such as, educators, architects, engineers, private citizens, etc., for the specific purpose of obtaining well constructed, efficient, and economical school plants. This service includes assistance in the solution of problems of operation and maintenance, through research, statistics, consultation, and personal association with particular regard to the health, safety, and welfare of the occupants.

Virginia Statute and Regulations of the State Board of Education require prior approval by the Superintendent of Public Instruction of the plans and specifications for the construction of all new school buildings, alterations, and additions. This approval extends to the desirability and need of the new building, the location within the county or city, the location on the site, the educational and functional planning, the size of the building, the strength of materials, the type of construction, and other pertinent factors that should be considered in the cost of planning, erecting, and maintaining the school building.

During the year, ninety-eight school construction projects were cleared for final approval as conforming with the requirements of the Statute and the Regulations of the State Board of Education. Many other projects were reviewed in their various stages of architectural planning, involving practically all the

counties and cities of the State, but were not cleared for approval.

It is certainly encouraging to note the general improvement evident in the new school buildings being planned and particularly the emphasis that is being placed on function as to materials, design, equipment, and instruction. The schoolhouse is becoming recognized more and more as an instrument of education and the important role it plays, if properly planned, in our economic and social

system.

A number of bulletins and memoranda covering the planning of special school facilities were developed for use by architects and school superintendents. Schematic layouts are being developed. The old Virginia Statute governing school building design was materially amended by the 1950 Session of the General Assembly, which will allow for much more flexibility in school planning. A number of important amendments to the School Building Regulations were adopted by the State Board of Education. An entirely new system of inventory reporting and records covering the physical facilities was put into effect. The Virginia Conference on Classroom Planning was jointly sponsored with the Richmond Public Schools, The Virginia Chapter of American Institute of Architects, the University of Richmond, and the Virginia Education Association.

Further revision is needed of the School Building Regulations. Likewise a guide for planning the entire school plant is needed, covering particularly the functional and educational phases. Factual or schematic planning guides should be further developed for distribution to the architects, school superintendents,

and others.

PUPIL TRANSPORTATION

It is the aim of this Service to aid local school officials in every possible way in providing adequate, comfortable, convenient, and economical pupil transportation. The efforts to support this aim include:

- (1) Instruction of School Bus Drivers.—Meetings were held during the year in 98 counties. A total of 2,340 drivers attended these meetings. Superintendents, principals, supervisors of transportation, mechanics, and representatives of the State Police and of the local councils of the Governor's Highway Safety Committee were also present.
- (2) Transportation Surveys.—Many transportation surveys were made for the purpose of improving existing systems to meet changed conditions. Many have been made in connection with school building surveys. The demand for the latter has become so great that it has been more and more difficult to meet. This type of survey has proved to be so helpful in converging the thinking and planning of groups with different ideas that the demand for it is likely to continue to increase. Surveys were

made in 27 counties and a total of 68 maps were prepared as a part of this service. Spot maps showing the number of children transported and the points at which they get on buses were made for 29 counties.

- (3) Reports of Surveys.—Many survey reports have been presented by representatives of this Service to School Boards at their regular meetings. Some joint meetings of School Boards and Boards of Supervisors have been attended for the purpose of presenting, explaining, and discussing proposed transportation systems. Several public meetings in different counties have also been attended for this same purpose.
- (4) School Bus Repair Shops.—Blueprints for bus repair shops have been furnished in a number of instances. This Service has also been consulted and requested to advise concerning the location, erection, equipping, and staffing of these shops.
- (5) Maintenance Program.—Preventive maintenance has been and is being stressed as the surest means to safe and economical transportation. Shops have been visited, maintenance problems have been discussed with the mechanics, and recommendations for improvements, where needed, have been made.

These are a few of the services rendered by this Service. The continuation

of this aid is planned and is available whenever it is needed.

Pupil transportation continues to expand and to improve at an unpredictable rate. The number of buses now in operation is 2,852. During the year they transported 251,077 pupils and traveled a total of 25,100,813 miles. Little progress has been made in reducing the loads and distances traveled (the average number of pupils per bus was 88 and the average number of miles per bus per day was 49). The goal is 75 pupils and 40 miles per bus per day. The table below shows the trend for a four-year period.

YEAR	Number Pupils Trans- ported	Number Buses	Number Miles	Average Number Pupils Per Bus	Average Number Miles Per Bus Per Day	Cost Per Pupil	Cost Per Mile	Cost of Operation Less Gas Tax Refund

COMMENTS

- 1. Total State funds for Operation listed above in the amount of \$31,715,487.48, include Federal funds channeled through the State Board of Education in the amount of \$1,619,056.61 for the School Lunch program, and \$490,592.06 on account of Vocational Education, making a total of \$2,109,648.67 or 2.16% of total receipts.
- 2. Of the total amount spent for operation (\$72,089,232.78), 43.99% was provided from State funds and 56.01% from local funds. Of the total expenditure for all purposes (\$97,481,738.81), 33.06% was provided from State funds (including Federal) and 66.94% from local funds.
- 3. Distribution of costs of salaries of Instructional Personnel:

Total instruction......\$50,476,178 48

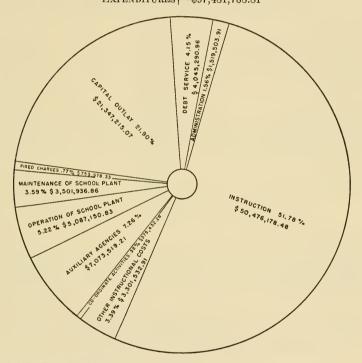

4. The above tabulation does not include reimbursement to county and city school boards in the amount of \$1,691,855.16 (counties \$1,609,455.82, cities \$82,399.34) on account of Veterans Training classes operated under contract with the Veterans Administration.
